Measuring Health System Quality and Responsiveness (203534)

Margaret Kruk

2017 Fall (2.5 Credits) **Schedule:** W 0345 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 17

The objective of the course is to develop students' skills in the measurement and analysis of health system quality and responsiveness from the perspectives of health system planners and health care users. The course will review the conceptual frameworks of quality of care and patient satisfaction and apply these to current and new approaches to measuring quality. While the course will focus on lower-income countries it will cite US and other OECD country experience. Upon completion of the course, students will be able to identify the key constructs underpinning health system quality, patient experience and responsiveness, and population preferences for health. They will be familiar with methods for measuring patient expectations of health systems using stated and revealed preference and methods for measuring quality processes and outcomes. The course will also introduce students to existing data on health system quality and give them an opportunity to use these data to analyze a specific research question. The class will review and critique novel methods to measure quality and patient experience. Finally, students will discuss measurement approaches and challenges in on-the-ground programs to improve quality of care, such as results-based financing.

This is a doctoral level seminar course that will include lectures, but be primarily oriented around student-led discussion. Students will complete an independent research project, that is expected to yield the skeleton of a paper for publication. Students will also have the opportunity to improve other key research skills, including data organization and management, conceptualization and operationalization of research questions, model selection, and presentation of data in research papers. Students will practice and experience peer review and critique.

Prerequisites: (PHS2000A and PHS2000B) or (BST201 and EPI201 and EPI202) or other intermediate graduate level biostatistics and epidemiology with instructor's permission. GHP 210 Concepts and Methods of Global Health and Population Studies recommended but not required.

Restricted to Doctoral students.

Requirements: **HSPH: GHP500**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Global Health & Population 500 Section: 1

Measuring Health System Quality and Responsiveness (203534)

Margaret Kruk

2016 Fall (2.5 Credits) **Schedule:** W 0330 PM - 0620 PM

Instructor Permissions: None **Enrollment Cap:** 17

The objective of the course is to develop students' skills in the measurement and analysis of health system quality and responsiveness from the perspectives of health system planners and health care users. The course will review the conceptual frameworks of quality of care and patient satisfaction and apply these to current and new approaches to measuring quality. Modeling for Health System Analysis & Priority Setting (204258)

Stephane Verguet

2021 Spring (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course offers an introduction to modeling for health system analysis and priority setting in global health, and its key quantitative methods. Students will learn to use a range of tools to address central concerns and topics, including: health disparities; medical impoverishment and financial risk protection; economic evaluations for health policy assessment; health system performance and country performance on health. Modeling for health system analysis – and therefore this course – draws from the disciplines of global public health, health services research, epidemiology, economics and applied mathematics. Through

readings, homework, basic programming using R software (www.r-project.org), and a research assignment, students will gain solid quantitative knowledge of the field.

The course is designed around three main areas of inquiry and application, with an emphasis on low- and middle-income countries:

I. Economic evaluation for health policy assessment
II. Health system modeling
III. Efficiency, equity, and performance

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | GHP SM2, PhD PHS GHP, GHP-SD

Wave 2 | Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Introduction to Qualitative Research for Global Health (190424)

Aisha Yousafzai

2021 Spring (2.5 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 35

This course introduces students to qualitative research design and methods applied in global health. Contrasts will be drawn with quantities and mixed-methods approaches in order to consider the place of qualitative research in global health. The course aims to provide students with an understanding of when to use qualitative research approaches, explores the philosophical debates around qualitative research and the theories that underpin qualitative research designs to consider which qualitative methodologies is appropriate for the research, and critically appraise the quality and credibility of qualitative research. This practical-oriented course will equip students with the knowledge and skills to appropriately design, plan and appraise qualitative research. The course topics will include the application of qualitative research approaches in global health, qualitative research designs, qualitative methods, ethics and critical appraisal of qualitative research.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | GHP SM2, PHS GHP, MPH45 GH, MD-MPH45 GH

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Qualitative Research Methods for Global Health (190424)

Theresa Betancourt

2017 Spring (2.5 Credits) **Schedule:** F 1030 AM - 0120 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The aim of this course is to provide students with an introduction to qualitative methods for global health research. The module is designed to expose students to a wide range of topics including: developing research questions, sampling and site selection, frequently used qualitative methods (such as interviews, observations, focus groups), design of qualitative research protocols, as well as data management and analysis. Students will engage in a variety of active learning exercises (such as constructing and conducting a short informal interview) and will work in small groups on the preparation of a qualitative research project on a defined topic area of multicultural health. Class activities and discussions will aim at building a research community in the class, where students support each others development as researchers recognizing the complexity, benefits and limitations of conducting cross-cultural qualitative research.

Course prerequisite:Prospective students wishing to enroll in GHP 504 must email an essay (maxim half-page) to course TAs, by November 28. All admitted students will be notified by December 12.

The essay should describe:- Current departmental affiliation, degree program and remaining time to graduation- Rationale for and interest in pursuing training in qualitative methods- Upcoming plans to use qualitative methods in research-Any prior training in or experience with using qualitative methods in field research (and lessons learned if relevant)- Research topics and populations in which the student plans to use qualitative methods

Measuring Population Health (190426)

Nicolas Menzies

2021 Spring (2.5 Credits)		**Schedule:**	TR 0200 PM - 0330 PM
Instructor Permissions:	None	**Enrollment Cap:**	70

This course will introduce students to the definition and measurement of population health. The primary objective is to provide an overview of the conceptual, methodological and empirical basis for quantifying levels of health in individuals and populations, including the construction of a range of different summary measures that combine information on mortality and non-fatal health outcomes. The course aims to give students an understanding of the technical basis for measurement in international work on population health; and to give students an appreciation of the uses and limitations of these methods in policy-making and priority-setting, particularly in low- and middle-income countries. Practical training will be given through homework exercises and a final exam. Students are expected to have a working knowledge of

Excel or an equivalent spreadsheet package. Other packages such as Stata will be introduced during the course for those with no previous experience. Required for MS students in the department of Global Health and Population. Useful for MPH and doctoral students interested in the construction, interpretation and application of health indicators.

Course Note: There will be optional sessions held on some Fridays from 10:30 to 11:30am to discuss more advanced topics. Doctoral students are strongly encouraged to attend these sessions, and all students are welcome.

Course Prerequisite(s): GHP220 or permission from instructor.

Global Health & Population 507 Section: 1

Population Health Risk Factors (190427)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 55

Detailed knowledge of the roles of diseases and injuries, and of their causes and risk factors, is essential evidence for health policies and for planning and evaluating health systems and intervention programs. A substantial body of work has focused on the quantification of mortality and more recently non-fatal health outcomes, as covered in GHP220 (Introduction to Demographic Methods) and GHP506 (Measuring Population Health). Data on disease or injury outcomes alone tend to focus on palliative or curative services. Reliable and comparable analyses of lifestyle, environmental, and nutritional risks to health, on the other hand, are needed for preventing disease and injury. This course is designed to guide students through the multitude of concepts, methods, and data needed to conduct systematic assessment of health risks at the population level, and their applications, for example, in evaluating public health policies and intervention options.

The course builds on the knowledge and skills acquired in introductory epidemiology courses. The methods learned in the course, in addition to their independent applications to public health problems and priority setting, serve as a basis for other courses in the School, including those on evaluating the impact of health interventions, priority-setting using combinations of burden of disease and economic analyses.

The first block of lectures focuses on the concepts of risk assessment and the basic methods and data needs used for population level risk assessment. The second part of the course introduces the details of analytics of risk factors and their interventions. The last part of the course introduces the students to time dimensions of risk factor exposure, joint effect of multiple risk factors and effect of risk factors on health inequalities.

Course Activities: This is a Masters level course that covers the concepts and methods required to estimate the effect of risk factors or interventions on disease outcomes at the population level. The course will cover three major topics of estimating population exposure, determining effect sizes, and estimating the proportional and absolute effects of changes in risk factor distributions on the corresponding disease outcomes. The expectation is that during this course, the students will work in small groups to produce a brief scientific report on the potential effect of a risk factor or the impact of a risk factor intervention on one or more diseases at the population level in a selected population. Knowledge of introductory epidemiology and biostatistics is required.
Course Prerequisites: ID538 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI505)]

Additional Course Attributes:

Population Health Risk Factors (190427)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 55

Evidence on the population level impact of risk factors is required to design and prioritize public health interventions. This requires empirical evidence on the population distribution of the risk factor along with epidemiological evidence on the causal effect of the risk factor on the corresponding disease outcomes as well as evidence on the overall disease burden in the selected population. The course will introduce an analytical framework that uses these inputs to generate evidence on the proportional and absolute effects of risk factors on disease burden at the population level.

GHP507 is comprised of modules that cover major topics of risk assessment including: main concepts of causal inference; conducting a systematic review; developing an analytical dataset using the raw data; estimating population exposure distribution; conducting a meta-analysis to determine effect sizes; selecting appropriate counterfactuals; and estimating the proportional and absolute effects of changes in risk factor distributions. The course will also cover issues of cumulative exposures, joint exposures and effect of risk factors on health disparities. (These topics are covered in more detail in GHP509 along with issues of time-varying risk factors and quantification of uncertainty.)The expectation is that during the course, students will work in teams to produce a scientific report on the potential impact of a risk factor or intervention on one or more diseases at the population level in a selected population.

Course Prerequisites: GHP506 (concurrent enrollment allowed)

Child Protection in Theory and Practice (190428)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

Most societies recognize a distinction between the needs and capabilities of children and those of adults, regarding children as inherently in need of special protection from harm. To conform to this notion, governments extend special policy provisions and enact specific laws intended to regulate and encourage particular behaviors toward, around, and among children. International Human Rights Law and International Humanitarian Law guide such policies and legislation, but the heterogeneous application of these binding legal instruments can end up contradicting generally accepted interpretations of international law. A gap between written law and its application arises when cultural norms, education patterns, and religious tenets are incongruous with international standards and practices. At the same time, however, working through traditional or informal justice systems and ensuring that cultural context is considered are both critical for fomenting support for international law and standards in communities.

This course seeks to help students resolve some of the crucial challenges that arise concerning the interaction of children with the legal system as victims, witnesses, or alleged offenders. By studying the many country-specific, formal and informal justice systems that exist to protect, punish, and rehabilitate children, the course will also examine a number of thematic concepts related to child discrimination, notably on the bases of gender.

Students will learn to rely on data from justice systems, clinical medicine, social science, and public health to inform the evidence base for discussions, and merge these sciences with legal precepts and human rights to advance actions that are in a child?ÇÖs best interest.

By exploring case law pertaining to decision-making within and outside the formal justice system, this course will lay a foundation for further study in the discipline, and also bolster the repertoire of professionals using the law in advocacy work. Prior legal training or experience is not necessary. The course will provide training for professionals who are likely to interact with children in contact with the law, or those who may end up supervising those who do: lawyers, judges, public health officials, doctors, international civil servants, government officials, teachers, social workers, police and military officers, peacekeepers, members of the media, NGO workers, service providers, and leaders of human rights, civic, and religious organizations, among others.

Advanced Population Health Risk Factors (190429)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

Non-communicable diseases are the leading causes of death and disability worldwide and evidence on prevention policies are urgently required on global, regional, national and subnational levels. Such evidence is often generated by combining exposure data on risk factors with casual effects of risk factors or interventions from epidemiological studies using ?Çÿdisease models?ÇÖ. Several different approaches to such models have been developed and used in the literature in the past few decades and each have their own strengths and limitations.

GHP509 is a doctoral level seminar that aims to provide a critical review of the literature on population level analysis of risk factors and disease modeling specifically focusing on non-communicable diseases. The course builds up on the concepts and methods of discussed in GHP507 and expands the topics to include group-based and agent-based disease transition models along with the parametric g-formula. The required data and the main assumptions of each model will be examined.

Course prerequisite: GHP507

Assessing Impact of Population Health Interventions Through Analysis of Risk Factors (203319)

Goodarz Danaei

2016 Fall (5 Credits)		**Schedule:**	TR 1030 AM - 1220 PM F 1030 AM - 1220 PM
Instructor Permissions:	None	**Enrollment Cap:**	30

Direct evidence on the population level impact of health intervention is often lacking as these interventions are usally not designed to be regorously evaluated. One way to fill this gap, is to evaluate the impact of health interventions on disease outcomes through changes in the known risk factors of the targeted diseases. This requries empirical evidence on the impact of the intervention on the populationdistribution of the risk factor along with epidemiological eveidence on the causal effect of the risk factor on the corresponding disease outcomes, as well as evidence on the overall disease burden in the selected population. The course will introduce an analytical framework that uses these inputs to generate evidence on the proportional and absolute effects of interventions and risk factors on disease burden at the population level.

This is a Masters level course designed for students in Global Health and Population but open to students in all departments and degrees. The course will cover three major topics of estiamting population exposure which incorporates analysis of population health surveys, determining effect sizes using meta-analyses of epidemiological studies and modeling the effects of changes in risk factor distributions on disease outcomes and mortality. Knowledge of introductory epidemiology, biostatistics, and demography is required. The course will also cover concepts and methods for analysis of cumulative exposures, joint exposures, and effet of interventions and risk factors on health disparities.

The expectation is that during the course, the students will work in teams to produce a scientific report on the potential impact fo a risk factor or intervention on one or more diseases in a selected population.

Pre-requisites: EPI201, BST201, GHP506, and GHP220 (courses may NOT be taken concurrently)

Field Research Methods in Humanitarian Crisis: Refugee Health at the Thai-Burma Border II (190433)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 8

This course provides an opportunity for collaborative didactic and project based, practical learning between selected Harvard School of Public Health students and Burmese refugees living at the Thai-Burma Border. During the course, Harvard University students will be paired with Burmese refugee student of public health. Each Harvard student will work with refugee students in the field in order to remotely conduct a qualitative and/or quantitative research project in Umpiem Mai camp, Thailand that will substantively inform health programming. Students will meet weekly to learn practical pearls and pitfalls in conducting research in a chronic humanitarian emergency during lecture from experienced faculty from the Harvard Humanitarian Initiative. Students will be expected to have produced a manuscript of publishable quality by the end of the course.

Course Note: Students must have taken GHP546: Field Research Methods in Humanitarian Crisis: Refugee Health at the Thai-Burma Border I?Ç¥, the winter session course, as a prerequisite for this course.

International Humanitarian Response I (190434)

Stephanie Kayden

Gregory Gottlieb

Sean Kivlehan

2021 Spring (2.5 Credits) **Schedule:** W 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

This course offers practical training in the complex issues and field skills needed to engage in humanitarian work. Students will gain familiarity with the concepts and international standards for humanitarian response. While providing a solid theoretical foundation, the course will focus on practical skills such as conducting rapid assessments, ensuring field security, and interacting with aid agencies, the military, and the media during humanitarian crises. The course culminates in a required three-day intensive humanitarian crisis field simulation (GHP 518) in Spring 2.
Topics covered:

- **Humanitarian response community and history**
- **International Humanitarian Law and Human Rights Law**
- **Sphere standards (shelter, water and sanitation, food security, health)**
- **Civil-military relations, media skills, logistics, and budgeting**
- **Monitoring and evaluation, accountability**
- **Personal security, mental health, stress, and teamwork**

Co-requisite: GHP 518, International Humanitarian Response II, Spring 2.

Class Notes: **Instructor consent required. All prospective students must request instructor permission to join this course by completing the form at bit.ly/IHR2021.**

Requirements: **Co-requisite: GHP 518. Students outside of HSPH must request instructor permission to enroll in this course**

Essentials of Humanitarian Action in the Field I (190434)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 80

Students who enroll in GHP 515 MUST also enroll in GHP 518 in Spring 2.
This course will offer a practical and in-depth analysis of the complex issues and skills needed to engage in humanitarian work in field settings. Through presentations offered by the faculty of the Humanitarian Studies Initiative and guest speakers who are experts in their topic areas, students will gain familiarity with the primary frameworks in the humanitarian field (human rights, livelihoods, Sphere standards, international humanitarian law) and will focus on practical issues that arise in the field, such as rapid public health assessments, field cluster sampling techniques, application of minimum standards for food security, and operational approaches to relations with the military in humanitarian settings. Topics will be presented in case studies and in structured participatory modes. Additionally, these topics will provide the foundational knowledge and skills needed to perform successfully during Spring 2, GHP 518 course which will involve a three-day intensive simulation of a humanitarian crisis, which is a required component of this HSI program.

At the completion of this course, the students will be able to fulfill the following learning objectives: - Design a rapid assessment in the field including applying appropriate epidemiological methods to assess population needs in crisis situations; - Design, conduct, and analyze field interviews with key stakeholders in a humanitarian crisis - Synthesize the complex social, political, economic, geographic, and public health parameters that define the dynamic of a given humanitarian crisis; and - Analyze the historical frameworks that define current approaches to humanitarian response and to assess the relative utility of these frameworks in a particular situation.

Topics will be presented in case studies and in structured participatory modes. Additionally, these topics will provide the foundational knowledge and skills needed to perform successfully during Spring 2, GHP 518 course which will involve a three-day intensive simulation of a humanitarian crisis, which is a required component of this HSI program.

At the completion of this course, the students will be able to fulfill the following learning objectives: - Design a rapid assessment in the field including applying appropriate epidemiological methods to assess population needs in crisis situations; - Design, conduct, and analyze field interviews with key stakeholders in a humanitarian crisis - Synthesize the complex social, political, economic, geographic, and public health parameters that define the dynamic of a given humanitarian crisis; and - Analyze the historical frameworks that define current approaches to humanitarian response and to assess the relative utility of these frameworks in a particular situation.

Course note: This course is cross listed with Tufts Friedman School as NUTR324 and DHP213, and with the Harvard Graduate School of Design as SES05432.

2021 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 50

GHP 518 is an intensive field simulation at Harold Parker State Forest in North Andover, MA. Students will camp for two nights in the forest as part of an aid agency team responding to a simulated international disaster and conflict. Student teams will carry out rapid assessments, create a comprehensive humanitarian aid plan, and manage interactions with refugees, officials, and other humanitarian actors. Students will face challenges that test their subject knowledge, team skills, creativity, and grit. Note: In the event that large in-person gatherings continue to be suspended in Massachusetts, the simulation will be held as a single-day online virtual simulation.

Course Fee: $300 to cover camping gear hire, food, and other equipment costs. Course fee will be waived if simulation is held virtually.

Co-requisite: GHP 515, International Humanitarian Response I, Spring term.

Class Notes: **Instructor consent required. All prospective students must request instructor permission to join this course by completing the form at bit.ly/IHR2021.**

Requirements: **Co-requisite: GHP 515. Students outside of HSPH must request instructor permission to enroll in this course**

This course meets in Emerson 108 (25 Quincy St, Cambridge)

This course is a weekend-long field simulation that takes place between Friday, April 26, 2013 and Sunday April 28, 2013 at Harold Parker State Forest in North Andover, MA. Students will spend two nights in the forest as part of an aid agency team during a complex disaster and conflict scenario. During this simulated humanitarian crisis, students will carry out rapid assessments, plan refugee shelter, water, sanitation, food and health programs, and manage relations with other humanitarian actors and militia groups. Each

student team will produces a 10-15 page service delivery plan of response during the simulated crisis.
Course Fee: Students will be expected to contribute a $300 course fee to cover the per-capita cost of this experience.
Course Prerequisite(s): GHP515 (concurrent enrollment allowed)

Foundations in Humanitarian Studies (190437)

Instructor TBD

2012 Fall (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course will provide students with an introduction to the frameworks and constructs that form the foundation of humanitarian studies. The course will provide students of humanitarian action and response with essential understanding of the humanitarian architecture, the historical context for humanitarian response, international humanitarian law, and operational and policy issues in crisis contexts.

The course intends to:

1. **Provide a comprehensive overview of international humanitarian law applicable in conflict;**
2. **Review the historical and current context of humanitarian action, with particular attention to the evolution of mission mandates and the roles of governments, militaries, international organizations, and non-governmental organizations;**
3. **Develop students' capacity to undertake sound policy analysis and suggest practical recommendations on measures to promote the protection of vulnerable groups;**
4. **Examine the various technical sectors (e.g., nutrition, shelter, protection, emergency telecommunications, waste, sanitation, hygiene) involved in humanitarian response as well as the coordination and interaction of the United Nations with other lead agencies in humanitarian response operations.**

There are no prerequisites for this course.

The Ecology of Health in Development (190438)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course is a sequel to Human Ecology, GHP 253-fall II. It will be run as a semi-seminar course with about 1/3 lecture, 2/3 student-led discussions and reports. There will be a common core of general readings and then students will read different selections to contribute to the discussion. Themes: The Eco-social Distress Syndrome, a multidimensional imbalance between our species and the rest of nature against the background of the conflicting demands for a rising and equitable standard of living for all and the

constraints of sustainability.Each kind of society has its own pattern of relations with the rest of nature including resources, waste, microorganisms, pests, habitats, climate and demography and its own ways of generating knowledge giving rise to distinct patterns of knowledge and ignorance.Each habitat (natural or anthropogenic) provides human societies with its own constraints and opportunities and its own health spectrum. Different strategies of development have differential effects on all of these. In order to span a wide range of alternatives situations, the course will be organized around selected geographic areas (the Lake Victoria basin, Thailand or the Philippines, Central America and the Caribbean), habitats (tropical forests, semi-arid savannas, coastlines, cities), health problems (malnutrition, malaria, cholera, emerging viruses) and development strategies for resource use, agricultural development, national science strategy (neo-liberal, nationalist, socialist) with an emphasis on the less familiar approaches, and international efforts to reconcile development with ecology.

Course notes: Minimum enrollment required.

Econometrics for Health Policy (190440)

Sebastian Bauhoff

2020 Fall (5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 67

This is a course in applied econometrics for doctoral and advanced master level students. The course has two primary objectives: (1) to develop skills in linking economic behavioral models and quantitative analysis, in a way that students can use in their own research; (2) to develop students' abilities to understand and evaluate critically other peoples' econometric studies.

The course focuses on developing the theoretical basis and practical application of the most common empirical models used in health policy research. In particular, it pays special attention to a class of models identifying causal effects in observational data, including instrumental variable estimation, simultaneous equations and two-stage-least-squares, quasi-experiments and difference-in-difference method, sample selection, treatment effect models and propensity score methods.

Lectures will be complemented with computer exercises building on public domain data sets commonly used in health research. The statistical package recommended for the exercises is Stata.

Course Note: Students are expected to be familiar with probability theory (density and distribution functions) as well as the concepts underlying basic ordinary least square (OLS) estimation.

Course Activities: Optional review and computer lab sessions will be held.

Course Prerequisites: BST210 or BST213; or equivalent course taken at Harvard Chan or HGSE with instructor permission

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Political Economy and Ethics of Health Reform (190442)

Instructor TBD

2013 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 20

In this advanced doctoral seminar course, students will be introduced to theoretical and methodological approaches from political science, economics and applied ethics to understanding the policy process that leads to (or obstructs) health system reform. The course will begin by linking broad theoretical approaches to a pair of in-depth case studies (Mexico and Taiwan) of health system change. As the students become more familiar with these approaches in particular contexts, the course will build parsimonious theories that can be applied more generally. Students will learn to use comparative, quantitative and formal approaches to analyze health system change. Students will learn how to craft important research questions and to use the appropriate evaluation methods to investigate the impacts of health system reforms. This class will help students identify potential research topics by showing where the frontier of knowledge is about political economy and health systems and the determinants of health systems performance.
Course Prerequisite(s): EPI204 or EPI236 or BIO210 or BIO213

Practice and Culminating Experience for Global Health (190445)

William Bean

2016 Fall (1.25 Credits) **Schedule:** W 0530 PM - 0720 PM

Instructor Permissions: None **Enrollment Cap:** 67

This is a year-long course worth a total of 2.5 credits (1.25 in the fall and 1.25 in the spring).

This course is required for all students in the MPH/Global Health concentration as part of the program's culminating experience requirements. The course emphasizes practical skills, and provides opportunities to connect with professionals and communities of practice in global health. The course sessions and networking opportunities are organized around:

► the global health practice experience which is undertaken throughout the academic year and for many students, provides a focus during Winter Session. For all projects at least 125 work hours need to be documented.

► a poster presentation to fellow students and faculty the application of theoretical and conceptual frameworks acquired at HSPH within the context of the global health practice experience, as well as a written project abstract and brief self-reflection on lessons learned.

Course sessions take place on Wednesday late afternoons during the Fall Term and on Monday late afternoons during Spring 2. A detailed course schedule will be provided with the syllabus at the beginning of the course.

Course Restricted: MPH Global Health students only (or instructor permission)

Requirements: **HSPH: GHP 530**

Additional Course Attributes:

Instructor TBD

2013 Spring (0.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

This course is required for all students in the MPH/Global Health concentration as part of the program's culminating experience requirements. The course emphasizes practical skills and strategic planning methodologies, and provides opportunities to connect with professionals and communities of practice in global health. The course sessions, workshops, and networking opportunities are organized around:

- **the global health practice experience, either through the Winter Session Field Study trip, a practice project during the Winter Session (full-time), or a practice project throughout Spring (part time). For all projects at least 125 work hours need to be documented.**
- **the preparation of a global health practice report demonstrating the application of theoretical and conceptual frameworks acquired at HSPH within the context of the global health practice experience.**

Course sessions take place on a bi-weekly basis (on Monday late afternoon) during the Fall Term and take place on mainly in Spring 2 for 4-6 additional sessions. A detailed course schedule will be provided with the syllabus at the beginning of the course.

Introduction to Global Health Care Delivery (190446)

Joseph Rhatigan

2021 Spring (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 60

This course will engage students in analysis of case studies that describe interventions to improve health care delivery in resource-poor settings. Class room discussion of these case studies will help illuminate principles and frameworks for the design of efficient and effective global health interventions. Through a focus on HIV, tuberculosis, and other conditions affecting populations living in poverty, these cases will allow students to carefully consider the question of how epidemiology, pathophysiology, culture, economics, and politics inform the design of interventions.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Class Notes:

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | MPH45 GH, MPH65 GH, SM2 GHP

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/10/2019 01:00PM – 1/15/2019 11:59PM

Wave 2 | 1/16/2019 12:00AM – 1/17/2019 11:59PM

Wave 3 | 1/18/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Instructor TBD

2013 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

This course will engage students in analysis of case studies that describe interventions to improve health care delivery in resource-poor settings. Class room discussion of these case studies will help illuminate principles and frameworks for the design of efficient and effective global health interventions. Through a focus on HIV, tuberculosis, and other conditions affecting populations living in poverty, these cases will allow students to carefully consider the question of how epidemiology, pathophysiology, culture, economics, and politics inform the design of interventions.

Introduction to Spatial Methods for Public Health (190448)

Marcia Castro

2021 Spring (2.5 Credits)

Schedule: MW 0800 AM - 0930 AM
F 0800 AM - 0930 AM

Instructor Permissions: Instructor

Enrollment Cap: 20

This is an introductory level course in the conceptual and analytic tools used to understand how spatial distributions of exposure impact on processes and patterns of disease. It covers methods that allow: (i) examination of patterns of health and disease in place and time, (ii) application of geospatial technologies and methods for epidemiology, (iii) analysis of time-space relations, (iv) identification of clusters and diffusion of disease, and (v) study of geographical epidemiology of selected infectious and noninfectious diseases.

Course Activities: Assigned readings must be read in advance of class. Students will help summarize and lead discussions on several papers; complete a term project.

Students are highly encouraged to take one of the workshops on ArcGis offered by the Center for Geographical Analysis (CGA) - http://www.gis.harvard.edu.

Students who wish to enroll must email an essay (maximum half-page) to the course instructor, Marcia Castro (mcastro@hsph.harvard.edu) or submit directly within my.Harvard by 5:00pm on Friday, January 22, 2021. Applicants will be notified of their status in advance of Spring I add/drop deadline so students can plan accordingly. The essay should contain the following information: name, email, academic department and degree program, an explanation of how you will benefit from taking this course, the relevance to individual career path and/or research, and the dataset you have available to conduct spatial analysis.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Global Health & Population 535 Section: 1

Applied Demographic Analysis (190449)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

GHP 535 is a second level class which builds on the material covered in the GHP 272 Foundations of Global Population and Health, GHP 220 Introduction to Demographic methods, GHP 506 Measuring population health and GHP 507 Population health risk factors. It has been designed for those seeking more advanced training in demographic methods and analysis and is particularly recommended for doctoral students in the Population and Reproductive Health Concentration. Students are introduced to the commonly used methods through review of the literature in interactive lectures, assigned readings (3-4 per session), case studies and web-based sources. The most important part of the course is the application of a variety of analytic methods to cases chosen mostly from Africa and the Middle East. The section of data sources provides a guide to the use of complex data sets including those provided by DHS as well as other public domain surveys (e.g. UNICEF's MICS surveys). Together, these provide a graduate-level introduction to the concepts and application of standard as well as newer methods of demographic analysis, especially in populations where the data are incomplete or inaccurate. The emphasis throughout is on understanding the key relationships, models and assumptions used primarily for the analysis of levels, trends and

differentials in fertility, mortality and migration in developing countries. Practical training will be provided through sessions in the MicroLab. There are class exercises which will be completed as short homework assignments. There will be a final paper that brings together the analyses completed throughout the course. Full details of the homework assignments, MicroLab exercises and final paper will be provided in separate notes distributed in class.

Course Note: Computer use of at least one software package such as SAS/STATA/SPSS. Facility with EXCEL spread sheets and graph production assumed.
Course Prerequisite(s): BIO&EPI Basics (or ID538), and GHP220:

(ID538 or [(BIO200 or BIO201 or BIO202&203 or BIO206&207/8/9) and (EPI200 or EPI201 or EPI208 or EPI505)]) and GHP220. Concurrent enrollment in GHP220 is allowed.

The purpose of this Digital Methods course is to provide an introduction to the capabilities of the new digital tools, methods and research resources for increasing quality and efficiency of data collection, access, analysis, and visualization and overcoming methodological limitations. The use of technology for data collection, storage, analysis and visualization will be explored, with a particular emphasis on data collection and visualization.

The goals of the course are to:

1. **Provide an overview of some of the emerging technologies in social science, public health, and humanitarian research**
2. **Develop student skills in integrating and implementing selected technologies for research**
3. **Examine opportunities, limitations, and ethical issues that emerge when working with digital technology to address health, development, and humanitarian research and program**

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 24

The purpose of this Digital Methods course is to provide an introduction to the capabilities of the new digital tools, methods and research resources for increasing quality and efficiency of data collection, access, analysis, and visualization and overcoming methodological limitations. The use of technology for data collection, storage, analysis and visualization will be explored, with a particular emphasis on data collection and visualization.

The goals of the course are to:

1. **Provide an overview of some of the emerging technologies in social science, public health, and humanitarian research**
2. **Develop student skills in integrating and implementing selected technologies for research**
3. **Examine opportunities, limitations, and ethical issues that emerge when working with digital technology to address health, development, and humanitarian research and program**

Control of Infectious Diseases in Low/Mid Income Countries: Social, Political & Economic Dimensions (190453)

Richard Cash

2020 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 40

This course develops knowledge, skills and values to analyze the social, political and economic determinants and outcomes of selected infectious diseases of importance in low- and middle-income countries. Speakers include both practitioners and scholars in the field. Students work in small groups to research, prepare and present illustrative case studies, which highlight the importance of context in formulating effective and feasible interventions for prevention and control. Analytic

frameworks are developed to provide future guidance in dealing with these and other infectious diseases in low-resource settings. The course assumes a basic understanding of disease-specific epidemiology and stimulates critical thinking.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Control of Infectious Diseases in Low/Mid Income Countries: Social, Political & Economic Dimensions (190453)

Richard Cash

2019 Fall (2.5 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 37

This course develops knowledge, skills and values to analyze the social, political and economic determinants and outcomes of selected infectious diseases of importance in low- and middle-income countries. Speakers include both practitioners and scholars in the field. Students work in small groups to research, prepare and present illustrative case studies, which highlight the importance of context in formulating effective and feasible interventions for prevention and control. Analytic frameworks are developed to provide future guidance in dealing with these and other infectious diseases

in low-resource settings. The course assumes a basic understanding of disease-specific epidemiology and stimulates critical thinking.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM2 GHP, MPH45-GH, MPH65-GH, PHD PHS GHP

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/15/2019 01:00PM – 08/27/2019 11:59PM

Wave 2 | 08/28/219 12:00AM – 08/29/2019 11:59PM

Wave 3 | 08/30/2019 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

*****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course***

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Field Trip to Urban and Rural Bangladesh (190454)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

This mid-winter course to be held in Bangladesh will be conducted by the Independent University, Bangladesh School of Public Health (IUB-SPH). I will take advantage of the excellent opportunities available to study Public Health issues at three different institutions: Independent University, Bangladesh School of Public Health (IUB-SPH), the BRAC School of Public Health (BSPH) and the International Centre for

Diarrheal Disease Research (ICDDR,B). All these institutions have had an excellent track record of innovative, cutting edge public health research and practice. Prior to students leaving for Bangladesh, three seminars will be held at HSPH in Fall 2 to introduce students to the health situation in Bangladesh. This will include demography, the success of different health and family planning programs and future opportunities and challenges. A web site hosted at IUB-SPH is currently under construction which will have relevant information, reading lists, photos of past visits to help orient students.

Course Note: Selected participants must attend the three seminars in Fall 2.

Health System Reforms in China: Seminar and Field Study (190455)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

Ever since publication of the 2000 World Health Development Report, there has been an increasing global interest in the critical role played by health systems in improving efficiency, equity, and quality of health care, and in achieving the Millennium Development Goals (MDGs). How health systems cope with the significant economic downturn is an important challenge facing many countries.

This course introduces students to the basic methods for conducting health system analysis, sensitizes the participants on the global debate on health system reforms, and help the students gain some hands-on experiences by interacting with the major stake-holders in China. China represents an interesting country for conducting the field study on health system reforms, not only because it is the world's largest country and has a wide spectrum of health and health system issues, but also because China is at a critical stage of implementing new rounds of reforms.

Students will be divided into theme groups. At the end of the trip, each group will submit a research paper (about 20 pages), analyzing a particular issue facing China's health system and proposing solutions. Each group will present and discuss the results of their diagnosis at one of the last days of the course in China, commented by invited policy experts and policy makers.

The program will require a minimum of eight students, with a maximum enrollment of fifteen.

Field Trip to Brazil (190456)

Marcia Castro

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Brazil is the 6th largest country by area and has the largest population in Latin America. The country recorded the first confirmed COVID-19 case on February 26 and the first death on March 12, both in São Paulo state. In 24 days, the disease had spread to all federal units. As of September 11, 2020, Brazil reported more than 4.2 million cases (3rd in the world, after the US and India) and almost 130,000 deaths (2nd in the world, after the US).

Brazil was, in theory, uniquely equipped to implement a locally-adapted response to COVID-19. It has a free and universal health system, a strong community-based primary care program, and a long tradition in pioneering public health responses (e.g. the national immunization program, and the HIV/AIDS control program). It could learn from the mistakes and successes that other countries hit by COVID-19 made. It has a history of responding to new health threats by implementing governmental action and by generating high-quality scientific evidence. However, Brazil's response has been chaotic. Brazil's President Jair Bolsonaro downplayed the importance of the coronavirus. He also denies scientific evidence. Since May 15, 2020, Brazil does not a Minister of Health. The interim Minister is an active-duty Army general without any health training, who signed a new protocol of COVID-19 treatment on May 20 that includes the use of hydroxychloroquine (a treatment without scientific basis). COVID-19 statistics of morbidity and mortality expose (and exacerbated) structural inequalities of the country.

This course will offer a critical perspective of the COVID-19 pandemic in Brazil. We will discuss the context (present and historical), challenges and opportunities, responses at the federal and local levels, consequences, and the way forward. Speakers will include professors from Harvard and Brazilian Universities, policy makers, government officials, and representatives from social movements. Harvard Students will work collaboratively with Brazilian graduate students in projects around different aspects of the pandemic.

At the end of the course, students will present and discuss their project. Throughout this course, students will have an opportunity to interact with faculty from Harvard as well as faculty, public health workers, researchers, and students from Brazil.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Field Trip to Brazil (190456)

Marcia Castro

2018 Spring (1.25 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Brazil is the 6th largest country by area and has the largest population in Latin America. Although Brazil is the 8th largest economy globally, it has one of the highest levels of income inequality, which has a significant impact in public health. Infectious diseases remain an important cause of morbidity and mortality in Brazil. In this field trip to Brazil, students will learn about several infectious diseases that are endemic in Brazil and the biological, environmental and socioeconomic factors associated with their persistence and distribution.

Approximately 15 Brazilian students will also participate in the course. Professors from Harvard and from Brazil will lecture and lead discussions. Lectures will be in English.

The David Rockefeller Center for Latin American Studies at Harvard University, which has an office in Sao Paulo, will facilitate work with Brazilian colleagues and institutions and assist with logistical arrangements.

Lectures and discussions during the first week will focus on selected infectious diseases as well as social determinants of health, health policy in Brazil, and data sources and analysis. Students will also meet with researchers, public health workers and visit health care facilities. During the second week students will work in small teams to develop proposals. The group projects will require a broad approach that takes into account the biological, geoclimatic, social, economic, cultural, political, and demographic factors associated with the disease. At the end of the course students will present and discuss the results of their project with the entire class. Throughout this course the student will have an opportunity to interact with faculty from Harvard as well as faculty, public health workers, researchers, and students from Brazil.

Field Trip to Brazil (190456)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

Brazil is the 6th largest country by area and has the largest population in Latin America. Although Brazil is the 8th largest economy globally, it has one of the highest levels of income inequality, which has a significant impact in public health. Infectious diseases remain an important cause of morbidity and mortality in Brazil. In this field trip to Brazil, students will learn about several infectious diseases that are endemic in Brazil and the biological, environmental and socioeconomic factors associated with their persistence and distribution.

Approximately 15 Brazilian students will also participate in the course. Professors from Harvard and from Brazil will lecture and lead discussions. Lectures will be in English.

The David Rockefeller Center for Latin American Studies at Harvard University, which has an office in S?úo Paulo, will facilitate work with Brazilian colleagues and institutions and assist with logistical arrangements. Lectures and discussions during the first week will focus on selected infectious diseases as well as social determinants of health, health policy in Brazil, and data sources and analysis. Students will also meet with researchers, public health workers and visit health care facilities. During the second week students will work in small teams to develop proposals. The group projects will require a broad approach that takes into account the biological, geoclimatic, social, economic, cultural, political, and demographic factors associated with the disease. At the end of the course students will present and discuss the results of their project with the entire class. Throughout this course the student will have an opportunity to interact with faculty from Harvard as well as faculty, public health workers, researchers, and students from Brazil.

Humanitarian Negotiation on the Frontlines (190457)

Claude Bruderlein

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In an increasingly divided world, health professionals have been confronted with the growing politicization of policy debates, including ongoing attempts to question or limit the influence of science in government policy making. These challenges have been particularly visible in crisis situations such as the response to the COVID-19 pandemic. To fulfill their role in these politicized environments, policy professionals must develop capabilities to lead constructive dialogues with a wide range of stakeholders while searching for realistic compromises on policy options. Such capabilities involve the ability of building trust in a tense public arena while mitigating adversarial relationships with actors opposed to the proposed policies. Through an experiential learning approach, the Winter Study Course will examine the global response to the COVID-19 pandemic in conflict environments such as Syria, Yemen and Afghanistan. It will review the challenges and dilemmas of frontline negotiation in these contexts in a close (virtual) interaction with field practitioners in collaboration with the Centre of Competence on Humanitarian Negotiation (CCHN). Doing so, students will acquire a systematic methodology to engage in crisis negotiation in a proactive, critical, and practical manner. The Winter Study Course is designed for those planning to work in high-intensity environments such as the pandemic, climate crisis, natural disasters, armed conflicts and other critical situations.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Claude Bruderlein

2018 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Since 2006, Claude Bruderlein and his team have developed an experiential field-based learning program for graduate students at the Harvard Kennedy School of Government, the T.H. Chan School of Public Health, and the Harvard Law School. Students from other schools are welcome to apply. The course involves a field mission of 18 days to Jordan for 15 students and 2 instructors during the Winter session. While the course takes place in Jordan, its focus covers the larger response to the Syrian crisis.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Humanitarian Field Study Course: Negotiation of Access to Vulnerable Populations in the Middle East (190457)

Claude Bruderlein

2017 Spring (2.5 Credits) **Schedule:** MTWRF 0900 AM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Since 2006, the Program on Humanitarian Policy and Conflict Research (HPCR) at Harvard University has developed an experiential field-based learning program for graduate students at the Harvard Kennedy School of Government, School of Public Health, and Law School.

The purpose of the Winter Field Study Course in the MENA Region is to bring Masters and Doctoral students to examine strategic approaches for navigating the challenges and dilemmas of some of the most complex political and humanitarian issues. The Program at Harvard approaches these case studies as a means to furthering professional dialogue on complex issues, building exchanges between Harvard University graduate students and practitioners in the region, to shed light on the challenges of engaging in key dilemmas in the context of humanitarian action. Such contexts represent an extremely interesting and sophisticated political, social, legal, and policy environment for graduate students to explore and analyze the various agendas and situational factors through interdisciplinary, scientific lenses.

Following successful Winter Field Study Courses examining timely humanitarian issues in the West Bank, Nepal, Indonesia, Lebanon, Europe, India, and Jordan, the project will focus its attention in the coming year to the MENA Region. The 2017 offering will explore the challenges, dilemmas, and current practice negotiating access to vulnerable populations in the Middle East.

Humanitrian Field Study Course: Strategic Planning in Humanitarian Engagement in India (190457)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

Following previous successful field study missions to the West Bank, Nepal, Indonesia, Lebanon, and in Europe (UK, Italy, and Moldova), the Humanitarian Field Study Course will focus its attention in January 2013 on strategic planning and critical thinking methodologies in the context of the implementation of international humanitarian and human rights norms in South Asia. The course will have a particular emphasis on critically assessing and understanding the challenges faced by the Indian government as an emerging political and economic power with a significant role in determining regional and international norms and priorities in areas such as regional security, development, health, humanitarian action and human rights, while also being influenced by legal standards and humanitarian principles being established and promoted by the international community.

For the purpose of enhancing critical thinking and strategic planning skills among students, the course will consider the tensions and synergies between various international, regional, and domestic agendas surrounding some of the most salient humanitarian and human rights challenges currently affecting India; these will focus on issues of access to education, health, food, clean water, and regional and foreign security policies. This case will be considered in terms of its demographic profile, assessing the impact on populations, as well as the role of civil society, the government, regional bodies, and international cooperation.

The Field Study Course involves a three-week field mission: two weeks in Delhi, followed by one week in Geneva to engage various and humanitarian and human rights agencies at HQ level. Using an experiential learning approach, the field study mission will feature a series of visits and interviews with professionals engaged in diverse fields of work in these regions, as well as group analysis exercises. Students will be accompanied by the Lead Faculty, Professor Claude Bruderlein, and a Teaching Associate for the duration of the course.

During the Field Study Course, students will have the opportunity to meet with practitioners representing diverse perspectives, from senior government officials, local non-governmental organizations, private corporations, advocacy groups, United Nations officials, international humanitarian workers, and health professionals, among others. High-level discussions will be complemented by lectures and practical workshops on professional communication, critical thinking, and strategic planning methodologies in order to maximize the experiences of this field study.

Students will survey the various perspectives and strategies of relevant actors, as well as the underlying assumptions and biases that each of these approaches reveal. Through exposure to international law agendas and perspectives from both Delhi and Geneva, students will have the opportunity to examine and compare strategies for the development and implementation of humanitarian legal principles and human rights from an Indian/South Asian perspective on the one hand, and from the HQs of international agencies engaged in the design and promotion of international agendas on the other. Various strategies to enhance the implementation of international norms and community engagement will be explored. Ultimately, students will be asked to produce an analysis and a set of recommendations on a particular theme designed to guide the strategic engagement of a specific international agency engaged in humanitarian or human rights affairs of their choice in India. Finally, students will have the opportunity to develop their own professional thinking in this field, to network with senior practitioners in humanitarian action, and to test and apply their newly acquired skills to this dynamic and complex context.

The Mexican Health System: Responding to COVID-19 (190458)

Michael Reich

Martin Lajous Loaeza

2020 Spring (2.5 Credits)		**Schedule:**	MTWRF 0900 AM - 0600 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	15

This winter-session course introduces students to Mexico's evolving health system and its response to the COVID-19 pandemic, using a remote format. This remote field course will examine different aspects of the national response to the COVID-19 pandemic, using seminars with key leaders in Mexico's health system and teams of students dedicated to specific projects to support local organizations. Potential projects for the January 2021 course could include topics such as: health communication to enhance contact tracing; ensuring the drug supply chain for high-cost illnesses; development of a national center for health information; governance for quality of care; or analyses on reproductive and mental health in a pandemic.

The course provides students with a unique opportunity to use remote learning to examine the challenges in constructing an effective health system response to a pandemic in the complex federal system of Mexico. The course has three main components:

1. Learn about the Mexican Responses to COVID-19 through seminars and discussions with key decision makers and stakeholders from leading institutions, organizations and private companies.

2. Contrast the experiences of responding to COVID-19 in urban and rural areas of the country

3. Contribute to program monitoring and evaluation for one of three selected projects with partnering institutions, through a three-week group project of applied research.

During the first week students will learn about Mexico's health system and the contrasts between rural and urban areas. Lectures and discussions during the second and third weeks will focus on responding to

COVID-19 in Mexico City and will be focused on critical aspects of health in Mexico. The David Rockefeller Center for Latin American Studies in Mexico will provide support for organizing the course. The Mexican National Institute of Public Health will collaborate on the course. Spanish is recommended but not required.

The Mexican Health System: Reform, Implementation, and Monitoring/Evaluation (190458)

Michael Reich

Martin Lajous Loaeza

2018 Spring (1.25 Credits) **Schedule:** MTWRF 0900 AM - 0600 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This winter-session course introduces students to Mexico historic health reform, the *Seguro Popular*, which provided the financing of a comprehensive package of health services for 52 million Mexicans who previously lacked insurance. This field trip course will examine important challenges in the implementation and evaluating the reform, such as shifting from a curvature to a preventive health system and scaling up service delivery.

The course provides students with a unique on-site opportunity to examine the challenges in implementation and evaluation. The course has three main components:

1) Learn about the Mexican Health System through seminars and discussions with key decision makers and stakeholders from leading institutions, organizations and private companies.

2) Contast the experience of health reform implementation in urban and rural areas of the country

3) Contribute to program monitoring and evaluation for one of three selected projects with partnering institutions. Selected projects are focused on monitoring and evaluating access and quality of services as well as health promotion at a local level. Students are expected to work in groups part time for two weeks in one of the selected projects.

Lectures and discussions during the first and third week will take place in Mexico City and will be focused on critical aspects of health Mexico. During the second week students will travel to Chiapas and experience the contrasts between a rural and urban health system. The David Rockefeller Center for Latin American Studies in Mexico will provide support for logistics and travel arrangements. The Mexican National Institute of Public Health will collaborate on the course. Spanish recommended but not required.

Field Research Methods in Humanitarian Crisis: Refugee Health at the Thai-Burma Border I (190460)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 8

This course provides an opportunity for collaborative didactic and project based, practical learning between selected Harvard School of Public Health students and Burmese refugees living at the Thai-Burma Border. During this winter session course, Harvard University students travel to Umpiem Mai Camp, Thailand to join Burmese refugee students of public health for 3 weeks. Each Harvard student will work with refugee students in the field during this 3-week course. During the winter session, HSPH students will learn about refugee health, the chronic humanitarian crisis at the Thai-Burma Border, and common field methods used in humanitarian crisis zones to inform policy and programs. Students will collaboratively conduct a needs assessment and develop a research proposal with Burmese refugee students.

Course Note: This winter session course will be followed by a required 2 month Spring I course *GHP514 Field Research Methods in Humanitarian Crisis: Refugee Health at the Thai-Burma Border II* during which the research project will be implemented.

Instructor Permissions: Instructor **Enrollment Cap:** 6

The COVID-19 pandemic has had a direct impact on maternal health, with shortages in healthcare providers, reluctance of mothers to visit health facilities, reductions in breastfeeding practices, and other emerging issues. It is now more important than ever for public health researchers and practitioners to support maternal health organizations and the work that they do to protect the lives of women and girls.

For the first time, GHP 547: Field Experience in Maternal Health will be offered through a fully remote format. This course will provide students with an opportunity to apply their skills and knowledge to maternal health issues in low-income countries (such as Bangladesh, India, Peru, Uganda, and others) through remote placements with Women & Health Initiative partner organizations. Students are matched with host organizations based on their background and interests as well as the needs of the host organization. Each student's experience is individually co-designed in the fall by students and the host organization to meet the needs of both parties. In January, students will spend three weeks working remotely at a host institution under qualified supervision. The work may involve designing data collection

tools for upcoming studies, actively participating in ongoing data collection and analysis efforts (e.g. collecting online data, conducting remote interviews), preparing draft manuscripts for publication, and conducting needs assessments. Any student who thinks s/he may be engaged in research involving human subjects, such as focus groups, individual interviews and similar activities, must apply to the Human Subjects Committee for appropriate authorization during Fall 2.

Students will be required to attend 2-3 pre-course sessions in Fall 2 to learn more about maternal health and the particular challenges in the countries where host organizations are located. During the winter session term, students are expected to work a minimum of 20 hours per week on the project that they develop with their host organization. In addition, students and the teaching team will meet weekly to hear updates from students and to discuss salient topics in maternal health. At the conclusion of the winter session term, students will present their final product to the class. The teaching team will assign grades based on these products and will share them with the students' host institutions.

Please note: Interested students should email a brief statement on why you're interested in enrolling as well as a copy of your CV to *alanger@hsph.harvard.edu* and *noramiller@g.harvard.edu* by October 15, 2020.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

The Global Health System: Governance Challenges and Institutional Innovations (190462)

Instructor TBD

2013 Spring (2.5 Credits)		**Schedule:**	TBD
Instructor Permissions:	None	**Enrollment Cap:**	35

Public health challenges -- for example, pandemic flu, HIV/AIDS, obesity, neglected diseases, tobacco use, environmental degradation, and understanding health systems -- increasingly shape and are shaped by the political, economic, and social aspects of globalization. Outbreaks of new diseases, such as SARS or H1N1 flu, can wreak immediate economic havoc on a regional or global scale. Neglected diseases, such as sleeping sickness or dengue fever, continue to cause immense human suffering. Meanwhile, international rules that fall outside the traditional health sphere, such as those governing intellectual property, agriculture, human migration, and greenhouse gas emissions -- can have profound impacts of human health. While strong national health systems are critical for meeting population needs, the effects of and capacities to respond to a particular heath threat often lie outside the control of any one nation state.

The course is intended to equip students with a basic introduction to major public health challenges, focusing on those that transcend national boundaries, and key related questions in global governance. Students will gain understanding of the current functioning of the global health system and its shortcomings, and exposure to new approaches to addressing global public health challenges. Teaching methods in this intensive six-week session will include lectures, case studies, analytic writing, teamwork, and class discussion and debate. Students completing this course will gain the knowledge and skills needed to:

- **Identify major global heath challenges and key features of the current global health system**

- **Describe the necessary functions of an effective global health system**
- **Diagnose major governance gaps in the current system**
- **Evaluate a wide range of ?Çÿtools and mechanisms?ÇÖ for shaping global governance processes**
- **Analyze heath threats and opportunities outside the health sector**
- **Examine, assess and design institutional arrangements for improved governance**

Course Note: Cross-listed at HKS as IGA-490M

The Right to Health in Resource Poor Settings: Maternal Health in Tanzania (190463)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 15

In recent years there has been a proliferation of rights-based approaches to health (RBAs). There is substantial consensus at the international level as to the elements of an RBA. However, there are still few examples of operationalization and implementation of RBAs to health in practice. Using the `Concise Technical Guidance on the application of a human-rights based approach to the implementation of policies

and programmes to reduce preventable maternal morbidity and mortality?? adopted by resolution of the Human Rights Council, the course will examine implications of adopting an RBA for multiple actors across the policy-making, implementation and review cycle, as well as with respect to enforcement mechanisms and international assistance and cooperation. Through interviews with multiple stakeholders as well as facility visits, students will also explore the challenges to implementing an RBA to maternal health in a resource-poor setting, such as Tanzania.

Leadership Development in Global Health (190465)

Somsak Chunharas

2017 Fall (1.25 Credits) **Schedule:** W 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 32

The Richard L. and Ronay A. Menschel Senior Leadership Fellows Program offers a rare opportunity for those who have recently served in senior top-level positions in government, multilateral institutions, and non-profit organizations to spend three months at the Harvard T. H. Chan School of Public Health to share leadership vision and experiences, by mentoring and teaching of students who aspire to take on similar roles. These courses, taught by a Senior Leadership Fellow, will focus on various leadership challenges in areas such as, politics and public health; health equity; policy implementation; poverty and access to health care, and universal health coverage. Current fellows will offer a half-semester course that is unique and reflects the individual fellows career and leadership experiences. Examples of past fellows include:

- **Gabriel Jaramillo, General Manager of the Global Fund to Fight AIDS, TB and Malaria**
- **Recep Akdag, Minister of Health of Turkey (2002-2013)**
- **Ashok Alexander, Bill & Melinda Gates Foundations India office (2003-2012)**
- **Sujatha Rao, Union Secretary, Ministry of Health and Family Welfare, Government of India**

Course Note: Leadership courses are offered for an ordinal grade or audit, and are open to all Harvard University students. Students from schools other than Harvard Chan School must cross-register. Any undergraduates must first get approval from their degree program, and can take these courses for a letter grade only. These courses will fill on a first-come, first-serve basis.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Leadership Development in Global Health (190465)

Instructor TBD

2015 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Public health programs and initiatives have gained more international attention, and progress has been made to curb many health issues. Still, aspects of the political and social structure of a community impede progress. How can measures to improve air quality balance the personal choice to smoke and the right to clean air? Must sexual health programs contested by socially conservative groups be fully established in spite of their objections or implemented gradually? What is the right of culture to maintain practices detrimental to individual health? This course answers these questions.

This class discusses how leaders must navigate complex social and political environments to improve the health of communities. Examples will draw from current efforts to curb tobacco use in the Caribbean, to achieve universal HIV treatment, and address impending antimicrobial resistance globally. By identifying potential challenges to implementation and the positions of stakeholders, students will gain the tools needed to lead nations to a healthier future.

Spring 1 GHP 552

Public health programs and initiatives have gained more international attention, and progress has been made to curb many health issues. Still, aspects of the political and social structure of a community impede progress. How can measures to improve air quality balance the personal choice to smoke and the right to clean air? Must sexual health programs contested by socially conservative groups be fully established in spite of their objections or implemented gradually? What is the right of culture to maintain practices detrimental to individual health? This course answers these questions.

This class discusses how leaders must navigate complex social and political environments to improve the health of communities. Examples will draw from current efforts to curb tobacco use in the Caribbean, to achieve universal HIV treatment, and address impending antimicrobial resistance globally. By identifying potential challenges to implementation and the positions of stakeholders, students will gain the tools needed to lead nations to a healthier future.

Spring 2 GHP552

In September 2015 world leaders will gather at the United Nations to assess the achievements of the Millennium Development Goals (MDGs) and agree on the launch and implementation of the post 2015 Sustainable Development Goals (SDGs). There are currently three Millennium Development Goals for health; they include MDG 4 on child mortality, MDG 5 on maternal mortality and MDG 6 on reducing new infections in HIV, TB and malaria. However, the post 2015 agenda will have only one goal for health: universal health coverage. A number of lessons emerge which would inform how global health can be shaped in the next several years and help build on the gains achieved through the MDGs. Learning from past experiences and incorporating that knowledge into global health policy as well as practice will hopefully ensure better health outcomes as well as the efficient and effective use of limited resources. Furthermore, these lessons will reiterate the centrality of building health systems robust enough to not only quickly respond to emerging epidemics but also effectively deal with the prevention, care and treatment of existing diseases. This course focuses on the role of leadership during the last three decades in the fight against HIV/AIDS and the lessons to be drawn as we move to Universal Health Coverage (UHC). Students will have a critical look at how leaders influenced the strategy and policy direction of program implementation at different times during the epidemic, they will analyze the impact of these programs on the health system, and they will assess the applicability of the lessons as we move to UHC. The course will mainly draw from the experiences of countries that have received support from the World Bank, the President's Emergency Fund for AIDS (PEPFAR), and the Global Fund for AIDS, Tuberculosis and Malaria in Sub-Saharan Africa for fighting HIV/AIDS epidemic and strengthening national health systems.

Leading Health System Improvement in India: Lessons for the Future (190465)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 20

Leadership has several dimensions. These include vision, passion, flexibility, risk-taking, connectedness, and the ability to inspire. One key attribute of effective leaders is that they are able to recognize common patterns across varied situations. In seeking to resolve complex problems, leaders are able bring to bear innovative solutions drawn from seemingly different sectors. A complex and pervasive problem in public health is: How to scale up the delivery of often well-known solutions? Excellent interventions often achieve too limited a reach to have major health impact. For example, Coca Cola reaches far-flung villages in India, while a common measles vaccine does not.
This course postulates that approaches and methods drawn from the world of business are the key to scale up of delivery, with speed and quality. The aim is to build an understanding of the various dimensions of leadership in the delivery of public health, from the top to the frontline. We will examine the leadership experiences of the instructor, who with no background in public health, envisioned and worked to build the largest private HIV prevention program in the world. Leadership, scale, and the business model, are the three inter-related components of the course.
The course will primarily examine Avahan (2003-), the Bill and Melinda Gates Foundation?ÇÖs India HIV prevention program. Inferences will also be drawn from other public health and business delivery situations. The issues and critical choices involved in each stage of developing a large public health delivery program to achieve impact will be explored. The business analogies will be depicted in the design of strategy, creation of a fluid organization, speedy and flexible execution, and the building of sustainability, backed by dynamic advocacy at every stage. Leadership will function as the common thread highlighted throughout the sessions.
We seek to give students new insights and a toolkit for building personal leadership and approaching challenges of scale up, which they will likely encounter in a career in public health. The content of the course should be especially relevant to people who are interested in becoming leaders in public health policy, program design and implementation, and government.
Students will have the opportunity to engage and interact with and discover from the experiences of a diverse set of leaders from the field ?Çô such as a community leader of a sex worker organization, a business entrepreneur who advised large-scale public health programs, and a program implementer from the field. By the end of the course, we hope that students will have a deep appreciation of the knowledge and critical thinking required to lead large-scale public health delivery programs.

The eight week course focusing on leadership development will be taught by a Brundtland Senior Leadership Fellow in conjunction with Professor Robert Blendon, through the Division of Policy Translation and Leadership Development. The goal of this course is to give students an opportunity to explore decision-making and leadership first hand in the realm of public health, with particular emphasis on the role of evidence in the process. The course will examine leadership and decision making to the extent which evidence was and is used in the formulation of health programs in Tanzania, and will address the components of access, equity, quality and effectiveness while impacting health outcomes, especially among the poor, women, and children. A comprehensive look at decision making-- related to global health will be examined from the fellow??s perspective as the former Minister of Health and Social Welfare for Tanzania, a current member of the Parliament of Tanzania and, professor of medicine at the University of Dar es Salaam. The course will include, but not be limited to required readings, guest speakers, and interactive class sessions. It is an experiential rather theory based course. This course (open to all masters and doctoral students) will seek to unravel aspects of the complex sets of issues facing health systems and decision making in Tanzania.

The Richard L. and Ronay A. Menschel Senior Leadership Fellows Program offers a rare opportunity for those who have recently served in senior top-level positions in government, multilateral institutions, and non-profit organizations to spend three months at the Harvard T. H. Chan School of Public Health to share leadership vision and experiences, by mentoring and teaching of students who aspire to take on similar roles. These courses, taught by a Senior Leadership Fellow, will focus on various leadership challenges in areas such as, politics and public health; health equity; policy implementation; poverty and access to health care, and universal health coverage. Current fellows will offer a half-semester course that is unique and reflects the individual fellows career and leadership experiences. Examples of past fellows include:

- **Gabriel Jaramillo, General Manager of the Global Fund to Fight AIDS, TB and Malaria**
- **Recep Akdag, Minister of Health of Turkey (2002-2013)**
- **Ashok Alexander, Bill & Melinda Gates Foundations India office (2003-2012)**
- **Sujatha Rao, Union Secretary, Ministry of Health and Family Welfare, Government of India**

Course Note: Leadership courses are offered for an ordinal grade or audit, and are open to all Harvard University students. Students from schools other than Harvard Chan School must cross-register. Any undergraduates must first get approval from their degree program, and can take these courses for a letter grade only. These courses will fill on a first-come, first-serve basis.

Global Health & Population 553 Section: 1

Human Rights Dilemmas in Child Protection (190466)

Jacqueline Bhabha

2020 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 30

COURSE NOTE: Students taking the course for a letter grade are given registration priority over course auditors.

A growing number of children and adolescents around the world are subjected to violence, exploitation and other forms of abuse. These harms persist despite the proliferation of international norms and structures designed to protect this population and promote its wellbeing. In many cases global transformations exacerbate rather than reduce the risks of abuse and increase the protection challenges these risks give rise to. Though each category of child protection deficit has its own characteristics and its attendant normative framework, they all share common and definable elements. These commonalities reflect key structures of the society in which the harms occur: growing income inequality and poverty; natural or man-made disasters of unprecedented destruction; a failure to move beyond concerns relating to basic child survival and attend to core child protection concerns. The study of how societies address their child protection obligations, including the normative framework, advance planning and policy and practice initiatives undertaken, reveals a series of profound and unresolved dilemmas that go to their self-definition as global players. An investigation of the human rights dilemmas that arise in child protection on a global scale presents, in a microcosm, a perspective on the social and political dynamics affecting some of the world's most vulnerable populations.

The perspective of this course is twofold. One focus is on the child protection issues themselves, their genesis and impact. The other is on the human rights strategies and dilemmas relevant to those (at both the individual and societal level) charged with responding to rights violations affecting children and fulfilling public child protection obligations. In the midst of historic technological advances and significant progress in the realm of international human rights, the strategic choices and responsibilities facing leaders and others concerned with child protection are of increasing complexity and scope. Some challenges require long term structural planning and the ability to marshall resources for child protection across agencies and governments. Other challenges require immediate emergency responses that entail diplomatic, logistical and leadership skills. Yet others require multidisciplinary, integrative talents in order to understand and impinge on detrimental contemporary transformations that have aggravated the plight of many of the world's most vulnerable children. Little work has been carried out systematically in any of these areas, with the result that expertise on the ground is thin and operates in a somewhat evidence-free zone.

A key concern of the course will be to integrate legal approaches with those developed in the health and social sciences. A recurring theme will be the evaluation of how international obligations map onto policy outcomes and how human rights mechanisms affect problems facing vulnerable children on the ground. The course will begin with a brief review of the theory and literature relating to child protection and international human rights. It will proceed with an in depth discussion of case studies covering central aspects of child protection, child labor, child trafficking, child soldiering and child persecution. Analytic points will be derived from an investigation of specific problems, the legal frameworks relating to them and the solutions that have been advanced to address them.

Global Health & Population 553 Section: 1

Human Rights Dilemmas in Child Protection (190466)

Jacqueline Bhabha

2018 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 20

COURSE NOTE: Students taking the course for a letter grade are given registration priority over course auditors.

A growing number of children and adolescents around the world are subjected to violence, exploitation and other forms of abuse. These harms persist despite the proliferation of international norms and structures designed to protect this population and promote its wellbeing. In many cases global transformations exacerbate rather than reduce the risks of abuse and increase the protection challenges these risks give rise to. Though each category of child protection deficit has its own characteristics and its attendant normative framework, they all share common and definable elements. These commonalities reflect key structures of the society in which the harms occur: growing income inequality and poverty; natural or man-made disasters of unprecedented destruction; a failure to move beyond concerns relating to basic child survival and attend to core child protection concerns. The study of how societies address their child protection obligations, including the normative framework, advance planning and policy and practice initiatives undertaken, reveals a series of profound and unresolved dilemmas that go to their self-definition as global players. An investigation of the human rights dilemmas that arise in child protection on a global scale presents, in a microcosm, a perspective on the social and political dynamics affecting some of the world's most vulnerable populations.

The perspective of this course is twofold. One focus is on the child protection issues themselves, their genesis and impact. The other is on the human rights strategies and dilemmas relevant to those (at both the individual and societal level) charged with responding to rights violations affecting children and fulfilling public child protection obligations. In the midst of historic technological advances and significant progress in the realm of international human rights, the strategic choices and responsibilities facing leaders and others concerned with child protection are of increasing complexity and scope. Some challenges require long term structural planning and the ability to marshall resources for child protection across agencies and governments. Other challenges require immediate emergency responses that entail diplomatic, logistical and leadership skills. Yet others require multidisciplinary, integrative talents in order to understand and impinge on detrimental contemporary transformations that have aggravated the plight of many of the world's most vulnerable children. Little work has been carried out systematically in any of these areas, with the result that expertise on the ground is thin and operates in a somewhat evidence-free zone.

A key concern of the course will be to integrate legal approaches with those developed in the health and social sciences. A recurring theme will be the evaluation of how international obligations map onto policy outcomes and how human rights mechanisms affect problems facing vulnerable children on the ground. The course will begin with a brief review of the theory and literature relating to child protection and international human rights. It will proceed with an in depth discussion of case studies covering central aspects of child protection, child labor, child trafficking, child soldiering and child persecution. Analytic points will be derived from an investigation of specific problems, the legal frameworks relating to them and the solutions that have been advanced to address them.

Class Notes: **The first class meeting on 10/30 will meet in FXB G12.**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Innovation, Access to Medicines and Global Governance (190467)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 40

This graduate course will explore global policy issues affecting innovation and access to health technologies in developing countries. In particular, the course will examine the importance of innovation and access to health technologies like drugs, diagnostics and vaccines for achieving better global health; the role that global governance in a broad sense plays in facilitating and preventing achievement of these goals; the challenges of fostering research, development and innovation in medicines and health technologies in the discovery and development phases for diseases that primarily affect the world?ÇÖs poor (e.g., lack of markets/incentives, lack of capacity); barriers to providing access to medicines for people around the world at the delivery stage (e.g., intellectual property protections, trade regimes, corruption, counterfeiting, regulatory processes, health systems capacity, markets); and the role that international institutions and other actors can play in responding to these challenges (i.e., intellectual property reform, pooled funding mechanisms, incentives, information and accountability). Students will also review various proposals for reform and global efforts to address this challenge. This course will focus on international and global factors and will to a lesser extent address national pharmaceutical polices in developing countries. The course will be in a seminar format with active involvement of students through case study discussions and simulations. Students will learn about current policy processes and understand how countries are negotiating reforms in this field of global health.

Management Practices in Health Care Delivery (190468)

Rebecca Weintraub

2020 Summer (1.25 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 50

Health care delivery is complex and context-dependent and requires an interdisciplinary effort focused on value. Management Practices in Health Care Delivery provides a review of key strategy and management practices in global health programs and explores the essential components of high-value programs. It is designed to train current and future managers how to apply, test, and refine current frameworks in health care delivery. Students are challenged to apply the value-based delivery framework to programs in which they work.

The course consists of three modules which engage multiple disciplines and draw on leading experts.

Module 1: Designing and Measuring Value

Module 2: Practices and Processes for Value

Module 3: Planning for Value at Scale

The course highlights the array of relationships which characterize global health, including relationships with patients, providers, and payers. The principles addressed in the course supplement and complement case studies discussed in GHP532: Introduction to Global Health Care Delivery. Students will complete exercises pulling data from the Global Health Delivery (GHD) Case Collection (www.globalhealthdelivery.org/case-collection).

Course note: Students will need general understanding of current players in global health systems, as well as a general understanding of health delivery within ambulatory and inpatient care, including treatment and prevention of HIV, TB, and malaria.

Enrollment Requirements: Class is restricted to students in the GHDI program.

Requirements: **Class restricted to students in the GHDI program. Any other interested students must submit an instructor permission request.**

Prerequisites:
The course is open to all summer students, but priority will be given to students enrolled in the Global Health Delivery Intensive (GHDI) program.

Class Notes: **Students in the GHDI program receive priority enrollment into this class. Any other student must request instructor permission.**

This Class Has Priority Enrollment

Wave 1 :: Enrollment Opening – 07/09/2018 11:59PM:: GHDI Non-Degree Students

Wave 2 :: 07/10/2018 12:00AM – Enrollment Deadline :: GHDI Students and Students Receiving Permission

During the Wave 1 period any student receiving permission to join the course can join the waitlist. On 7/3/2018 any remaining seats will be offered to students on the waitlist who do not have time conflicts, credit conflicts, or enrollment holds.

Class Notes: **This class will meet at Harvard Medical School in TMEC 209.**

Value-Based Management in Global Health Delivery (190468)

Instructor TBD

2012 Summer (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

Value-Based Management in Global Health Delivery educates students in the fundamental principles of strategy and management in leading global health programs. This course is designed to train current and future managers how to apply, test, and refine current frameworks in health care delivery.

Global health delivery is complex and context-dependent and requires an interdisciplinary effort including the application of strategic and management principles. Furthermore, delivery is necessary to ensure that the investments in discovery and development generate value for patients and populations. This course discusses the application of value-based delivery to global health. It provides a revue of key principles in strategy and management and students are challenged to apply the value-based delivery framework to current programs in global health.

The course consists of four modules which engage multiple disciplines and draw on leading experts to help us explore each module.

- **Module 1: The Promise and Burden of Integrating Vertical Interventions into Health Systems**

- **Module 2: Managing Systems: Design and Impact on Delivery**
- **Module 3: Managing Operations: Workforce, Supply Chains and Data**
- **Module 4: The Role of Research**

Furthermore, throughout the course series, the course highlights the array of relationships which characterize global health, including relationships with purchasers, insurers, providers and patients. The principles addressed in the seminar supplement and complement the case studies discussed in Introduction to Global Health Care Delivery (GHP532). Students will complete exercises pulling data from the global health delivery case library.

Course Note

Students will need general understanding of current players in global health systems, as well as a general understanding of health delivery within ambulatory and impatient care, including treatment and prevention of HIV, TB, and malaria.

Prerequisite

The course is open to all summer students, but priority will be given to students enrolled in the Global Health Effectiveness Program.

Management Practices in Health Care Delivery (190468)

Rebecca Weintraub

Wafaie Fawzi

2016 Summer (1.25 Credits) **Schedule:** MTWRF 1045 AM - 1215 PM

Instructor Permissions: None **Enrollment Cap:** 64

Health care delivery is complex and context-dependent and requires an interdisciplinary effort focused on value. Management Practices in Health Care Delivery provides a review of key strategy and management practices in global health programs and explores the essential components of high-value programs. It is designed to train current and future managers how to apply, test, and refine current frameworks in health care delivery. Students are challenged to apply the value-based delivery framework to programs in which they work.

The course consists of three modules which engage multiple disciplines and draw on leading experts.

- **Module 1: Designing and Measuring Value**
- **Module 2: Practices and Processes for Value**
- **Module 3: Planning for Value at Scale**
  The course highlights the array of relationships which characterize global health, including relationships with patients, providers, and payers. The principles addressed in the course supplement and complement case studies discussed in GHP532: Introduction to Global Health Care Delivery. Students will complete exercises pulling data from the Global Health Delivery (GHD) Case Collection (www.ghdonline.org/cases).

  Course note: Students will need general understanding of current players in global health systems, as well as a general understanding of health delivery within ambulatory and inpatient care, including treatment and prevention of HIV, TB, and malaria.

  Prerequisites:
  The course is open to all summer students, but priority will be given to students enrolled in the Global Health Delivery Intensive (GHDI) program.

Fundamental Concepts of Public Health (190469)

Instructor TBD

2015 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 28

This course is intended to equip the student with an understanding of the foundational concepts that will help to organize thinking and learning throughout the DrPH program. Teaching methods in this intensive one-month session will include thought papers, group exercises, interactive lectures, scholarly readings, and class discussion and debate. Many students will have prior exposure to the academic study of public health, but there is likely to be a wide range of backgrounds in terms of disciplinary training, approaches, and practical experience. This course is intended, in part, to provide students with a common language and set of conceptual frameworks to guide learning throughout the program.

Course Restricted:DrPH students only.

Fundamentals of Global Health (190470)

Rifat Atun

2020 Fall (5 Credits) **Schedule:** MWF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 67

This course will introduce the students to the fundamentals of global health, in particular the main trends, challenges, opportunities and strategies. The course will will explore current knowledge base, perspectives, and methods for global health. This course is required for all incoming Master of Public Health students in the Department of Global Health and Population.

The course is organized into four blocks. The first block deals with evidence, theory, and methods related to the state of global health and population and their determinants, both past and present. In particular the first block focuses on the changes in the broad context, including patterns and trends in demographic, epidemiology, political, economic, legal, ecological, socio-cultural and technological changes that influence global health.

The second block covers the theory, methods and evidence on the approaches used to design, implement and evaluate policies to address global health and population problems. This block explores applied frameworks and strategies for managing the technical and political aspects of a policy cycle, and introduce students to approaches used in priority setting.

The third block introduces domains of responses to the challenges in global health and population, including global health architecture, financing of global health, global health systems and strategies for managing health risks, communicable diseases and non-communicable diseases. Universal health coverage and human rights as critical platforms for equitable responses in global health challenges are discussed.

The fourth block, lessons from the field, consists of integrative sessions that will use case studies to showcase examples of global health and population challenges experienced in different contexts and countries. Strategic responses to these challenges in varied contexts will be discussed and solutions generated within constraints identified. The integrative sessions will provide linkages among the three earlier blocks, while bringing together theory, empirical evidence, policy and practice.

Course restricted to MPH students in the GH field of study (45-credit and 65-credit programs).

Sudhir Anand

Amartya Sen

2016 Fall (5 Credits) **Schedule:** T 0130 PM - 0320 PM
R 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 18

The course will be focused on an examination of the constitutive role of health in human development, and

its instrumental role in economic development. It will include discussion of the conceptual issues and measurement problems in health studies, and also in assessing inequalities in health and healthcare. The correspondence and dissonance in the links between income inequality and health inequality will be investigated, and the challenge of instituting universal health care in poor countries will be examined.

Health of Urban Displaced Populations in Post-Conflict Colombia: The Medellin Social Develpmnt Model (190472)

Instructor TBD

2016 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 12

This course will pair students with Colombian students of public health to study the health effects from four components of a progressive social development model that integrates the peri-urban internally displaced populations in Medellin. Colombia is currently transitioning from a prolonged period of conflict and integrating the displaced population through initiatives in education, economics, transportation, and urban design impacts the health delivery system and ultimately this population health. The course will be in a seminar format that provides students with in-depth interviews and discussion sessions with high and mid-level policy makers and local implementing partners of the four components of the model, as well as those involved in peace and diplomacy efforts, and those whose disciplines (econometrics, urban design, social and behavioral sciences) engage population health. Students will develop a widely-disseminated series of white papers that would engage policy-makers from not only local and national US and Colombian governments, but those from multi-lateral institutions working on issues of post-conflict displaced population health. The series would focus on each of these four areas and propose ongoing research and policy agendas. The course will contribute to the development of emerging student leaders in Medicine and Public Health as key players in post-conflict time periods for displaced populations by learning from local leaders in governmental and non-governmental organizations.

Integrating Seminar I (190473)

Instructor TBD

2015 Spring (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 15

This course is intended to assist students in processing and synthesizing competencies and knowledge taught in the DrPH program through methodical, integrated application to real-world health challenges. The course will also provide a structured method for defining, researching, analyzing, designing and evaluating responses to complex, intractable public health problems. Teaching methods in this course will include lectures, class discussion, readings, group work, team presentations, team memos, and critique from peers, instructors, and outside experts.

At the completion of the course the student will be able to:

- **Apply a methodical analytical approach to addressing a wide range of public health challenges, using knowledge and skills gained in previous DrPH coursework**
- **Define and frame a public health problem ?Çô justify why an issue is a ?Ç£problem?Ç¥ that deserves attention**
- **Carry out background research on the problem, identify knowledge gaps and research needs**
- **Identify or design alternative approaches to addressing the problem, and evaluate those alternatives using clearly-defined criteria and methods, including projecting outcomes of various alternatives**
- **Choose, defend, and plan the implementation of a recommended course of action**
- **Design a plan to monitor & evaluate implementation**
- **Communicate publicly on the problem and recommendations**
- **Understand how to apply previous coursework, while identifying high-priority gaps in knowledge and skills that may be addressed in the remainder of the DrPH program.**

Course Restricted: DrPH only

Program Monitoring and Evaluation Methods for Use in Field Settings (190475)

Joseph Valadez

2017 Spring (2.5 Credits) **Schedule:** MW 0330 PM - 0520 PM

Instructor Permissions: None **Enrollment Cap:** 60

The objective of this course is to introduce students to the concepts of program monitoring and evaluation (M&E) as used by major donors, international organizations and NGOs. The course is concerned with the practical issues of applying these methods in a field setting, and it is intended to train students with the necessary skills that can be used in a future field assignment. Upon successful completion of the course, students will understand the essential role of M&E in these organizations and how these principles are used when planning and assessing a program effectiveness and improving its impact. Students will also become familiar with critical international indicators used in program M&E and the challenges associated with their measurement. The course will also prepare students to design and implement a survey with two often-used sampling methods in a typical field setting: EPI Cluster Sampling and Lot Quality Assurance Sampling (LQAS). Using typical maternal, newborn, child and reproductive health programs as a context, students will learn how to plan a survey, including selecting a sample size, sample communities, sample households, and sample individuals. Students will also learn to construct and use a sampling frame, prepare and use a questionnaire, analyze and report survey results, and prioritize the survey results for improving a health program. Lastly, students will apply the same principles to the assessment of health facilities and understand the importance of decentralized M&E for health program management.

Course Note: Course meets a requirement for MPH45 Global Health and MPH65 Global Health, and remaining seats will be available on a first-come first-serve basis.

Contemporary Developing Countries: Entrepreneurial Solutions to Intractable Problems (190476)

Tarun Khanna

2017 Fall (5 Credits) **Schedule:** MW 0330 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course will provide a framework (and multiple lenses) through which to think about the salient economic and social problems of the five billion people of the developing world, and to work in a team setting toward identifying entrepreneurial solutions to such problems. Case study discussions will cover challenges and solutions in fields as diverse as health, education, technology, urban planning, and arts and the humanities. The modules themselves will be team-taught by faculty from engineering, the arts, urban design, healthcare and business. The course will embrace a bias toward action by enabling students to understand the potential of individual agency in addressing these problems. All students will participate in the development of a business plan or grant proposal to tackle their chosen problem in a specific developing country/region, emphasizing the importance of contextualizing the entrepreneurial intervention. The student-team will ideally be comprised of students with diverse backgrounds from across the

University.

Note:
Offered jointly with the Business School as 1266, the School of Public Health as GHP 568, the Kennedy School as PED-338, the Law School as HLS 2543 and the Graduate School of Education as A-819.

Guaranteed spots for 20 HSPH students with more possible if space permits. Space will be allocated on a first come first serve basis. Course will meet in Sever Hall 113 (Harvard Yard)

Class Notes: **Course note: Offered jointly with HBS as 1266, Harvard Chan School as GHP 568, HKS as PED-338, the Law School as HLS 2543, GSE as A-819, and GSD as SES 5375.**

2016 Fall (5 Credits) **Schedule:** MW 0330 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course will provide a framework (and multiple lenses) through which to think about the salient economic and social problems of the five billion people of the developing world, and to work in a team setting toward identifying entrepreneurial solutions to such problems. Case study discussions will cover challenges and solutions in fields as diverse as health, education, technology, urban planning, and arts and the humanities. The modules themselves will be team-taught by faculty from engineering, the arts, urban design, healthcare and business. The course will embrace a bias toward action by enabling students to understand the potential of individual agency in addressing these problems. All students will participate in the development of a business plan or grant proposal to tackle their chosen problem in a specific developing country/region, emphasizing the importance of contextualizing the entrepreneurial intervention. The student-team will ideally be comprised of students with diverse backgrounds from across the University.

Note:
Offered jointly with the Business School as 1266, the School of Public Health as GHP 568, the Kennedy School as PED-338, the Law School as HLS 2543 and the Graduate School of Education as A-819.

Guaranteed spots for 20 HSPH students with more possible if space permits. Space will be allocated on a first come first serve basis. Course will meet in Sever Hall 113 (Harvard Yard)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Contemporary Developing Countries: Entrepreneurial Solutions to Intractable Problems (190476)

Instructor TBD

2014 Fall (5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

This survey course focuses on several categories of social and economic problems faced by the countries of South Asia, with specific focus on the realms of Education, Health, and Financial Inclusion. Each problem category will be dealt with through a survey lecture, supplemented by assigned and recommended readings for those wishing to explore the topic further, and an in-depth look at several organizations, companies and non-profits that have attempted to address some of the problems within that category. The primary objective of the course is to engage students (in an inter-disciplinary and university-wide setting)

with the modern day challenges affecting South Asia, and to examine a range of entrepreneurial attempts to solve these problems.
The course is designed for students from all parts of the University. The course will be listed at HBS, FAS, HSPH, HGSE, HLS, HMS, HKS and, time permitting, other Harvard faculties. Last year, the course attracted students from all over the University, including a number of advanced undergraduates. The mixture of student backgrounds is crucial for its success. The lectures and deep-dive case studies are the core of the course, a must for all attendees; the course requirements are tailored separately to the needs of undergraduate and graduate students, with plenty of opportunities for cross-fertilization of ideas and experiences.
There will be an introductory and concluding module, interspersed with a module on each of the four problem categories, each lasting two to three weeks. In addition there will be a weekly section, mandatory for undergraduates, optional for graduate students, for a more in-depth exploration of selected readings and, perhaps, discussions of additional interesting cases of success or failure. Graduate Teaching Fellows (TF), with relevant knowledge of the material and geography, will run the small sections.
Lectures will review the available evidence on the incidence, causes and consequences of the problem in question. The lectures and sections will draw on a set of inter-disciplinary required readings, several case studies, and a host of recommended readings which will be available for deep-dives. Additionally, we will draw extensively on video and film materials when relevant. Case studies of each solution will examine whether and why it worked, and how it could have been improved, as well as compare the effort to other ambient successes and failures. Some overview lectures might be delivered by visitors; the case studies will be discussed interactively and might feature the protagonists wherever feasible.
Graduate students will be required to develop a project report. The idea of the project is to present a candidate solution - this may take the form of a business plan, a plan to build a non-profit, a plan to create a regulatory intervention, all of which are equally admissible - that solves a crisply stated, and significant, problem in a particular setting in South Asia.
Graduate students must self-assemble into project teams. Each team has to mix and match students from more than one Harvard faculty (thus, for example, a team of lawyers will not do, but mixing them with doctors or public health or public policy students will). Additionally, teams, once assembled, must make an effort to include any undergraduates who might choose to participate as full-fledged team members in lieu of their (undergraduate) final report.
After the course, but not as a part of it, teams that reach a threshold level of excellence in their project reports may be eligible for funding through the South Asia Initiative for exploratory work on their project.
Course Note:Guaranteed spots for 10 HSPH students with more possible if space permits. Space will be allocated on a first come first serve basis.
Course will meet in Sever Hall 113 (Harvard Yard)

Section I of the two-part course for MPH45 Global Health Students.

This course is required for all students in the MPH45 Global Health Field of Study as part of the program's culminating experience requirement. The course emphasizes practical skills, and provides opportunities to connect with professionals and communities of practice in global health. The course sessions and networking opportunities are organized around:

► the global health practice experience which is undertaken throughout the academic year and for many students, provides a focus during Winter Session. For all projects at least 125 work hours need to be documented.

► a poster presentation to fellow students and faculty the application of theoretical and conceptual frameworks acquired at HSPH within the context of the global health practice experience, as well as a written project abstract and brief self-reflection on lessons learned.

Co-requisite: GHP 945B Practice and Culminating Experience II (Spring II)

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Practicum and Culminating Experience for Global Health (MPH65) (204469)

Jennifer Leaning

Shekhar Saxena

2020 Fall (1.25 Credits) **Schedule:** M 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 32

The capstone course is mandatory for all MPH65-Global Health students, as part of the practicum and culminating experience requirement. The course is a forum for discussing the main features and challenges of the global health profession. Particular emphasis is given to analyzing, synthesizing, and sharing important aspects of the field experience. This exercise supports a community of learning and helps develop the communication skills—oral, written, visual, and listening—needed for success in public health.

The main elements of the capstone are:

a. The global health practice experience, which can be developed either by students themselves or by Harvard Chan faculty and staff and includes project travel and/or work during the summer. For all projects, a minimum 300 documented work hours is required.

b. The preparation of a final paper during the capstone course that includes both a description of the global health project undertaken as well as the lessons gained from the experience.

Course sessions will be held during Fall of the second year.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Societal Response to Disasters (190741)

Satchit Balsari

Jennifer Leaning

2020 Fall (2.5 Credits) **Schedule:** R 0345 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** 70

Designed for physicians, public health officers, or others who may be charged with responsibility for

intervention during crisis situations. The focus will be on societal response to disasters and war as well as decision-making under stress. The course will examine U.S. and international case studies within the established research and policy frameworks for disaster response and humanitarian action.

Students outside of HSPH must request instructor permission to enroll in this course

Large Scale Effectiveness Evaluations (190748)

Margaret Kruk

2021 Spring (2.5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 40

This course provides an introduction to the evaluation of large-scale programs aimed at improving health and/or nutrition status of whole populations, rather than individual subjects. The emphasis of the course is on global health and on low and middle-income countries, although the methodological approach will also be applicable to developed country settings.

The course will cover randomized cluster trials, observational or quasi-experimental designs, and econometric analyses. Students will be exposed to a broad overview of different methodological approaches, rather than focusing in great depth at any specific type of design.

Enrollment Note: Priority is given to GHP students.

Course Prerequisite(s): (BST 201 and EPI 201 and EPI 202) or ID 201 or (PHS 2000A and PHS 2000B), or instructor permission.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | SM2 GHP, MPH45 GH, MD-MPH45 GH, PHS GHP

Wave 2 | DRPH & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **HSPH: ID212**

Additional Course Attributes:

Nutrition and Global Health (190752)

Wafaie Fawzi

2021 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

The course will cover existing and emerging problems related to nutrition and global health. We will review the epidemiological, biological, behavioral, and social causes and consequences of malnutrition, with emphasis on infectious disease and maternal and child health outcomes. We will also review emerging problems related to the coexistence of over and under nutrition (double burden) present in many countries. Many of the readings will address the latest evidence on the efficacy of nutrition interventions, as this knowledge is a pre-requisite to planning sound programs. Practical aspects related to programs, including nutrition assessment, types of study design, and other aspects of monitoring and evaluation will also be presented and discussed in class.

At the end of the course students will be able to:

· Describe the different forms of malnutrition and their causes and consequences
· Understand how to assess and measure the nutritional status of populations based on dietary, anthropometric, biochemical and clinical measurements.
· Critically review the literature on the role of nutritional factors on health outcomes, and identify strengths and weaknesses of studies on global nutrition.
· Discuss the latest findings from epidemiologic studies on the role of nutrition in the prevention, care, and treatment of key infectious and maternal and child health outcomes.
· Integrate nutritional research findings into field programs; consider practical issues related to program design and implementation, and design an implementation research plan on a current topic related to nutrition and global health.
· Communicate research findings related to nutrition and health with leaders and policymakers in global contexts.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Nutrition and Global Health (190752)

Wafaie Fawzi

2018 Spring (2.5 Credits) **Schedule:** F 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 67

The course will cover the nutrition problems of less-developed countries. We will review the epidemiological, biological and behavioral consequences of malnutrition, with emphasis on infectious disease and perinatal outcomes. Many of the readings will address the latest on the efficacy of various nutrition interventions, as this knowledge is a pre-requisite to planning sound programs. Practical aspects related to programs, including nutrition assessment, types of study design, and other aspects of monitoring and evaluation will also be presented and discussed in class.

At the end of the course students will be able to:

• Assess the nutritional status of specific populations based on anthropometric, biochemical, and clinical measurements.

• Critically review the literature on the role of a nutritional factor and health outcomes, and identify strengths and weaknesses of each study.

• Discuss the latest findings from epidemiology studies on teh role of nutrition in the prevention, care, and treatment related to key infectious and perinatal health outcomes.

• Integrate nutritional research findings into field programs and consider practical issues related to program design and implementation.

Ethical Basis of the Practice of Public Health (190768)

Daniel I. Wikler

Ole Norheim

2020 Fall (2.5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 37

This course serves as an introduction to ethical issues in the practice of public health. Students will identify a number of key ethical issues and dilemmas arising in efforts to improve and protect population health and will become familiar with the principal arguments and evidence supporting contesting views. The class aims to enhance the students' capacity for using ethical reasoning in resolving the ethical issues that will arise throughout their careers.

Unlike courses in medical ethics, which mainly examine ethical dilemmas facing individual clinicians, the population-level focus of this course directs our attention to questions of ethics and justice that must be addressed at the societal level.

These include:

► What social response is required of a just society to the needs of its members for protecting and restoring health?

► Is population health something other than the aggregate of the health concerns of the individuals who make up a society at a given time? And what are the ethical implications of the answers?

► When are inequalities in health inequitable, and what priority should be assigned to reducing disparities in health when pursuing this goal might compromise the effort to maximize population health?

► Which ethical choices, if any, are unavoidable in developing the methodologies for measurement of health and of the global burden of disease?

► Which ethical choices if any are unavoidable in developing and using methods for priority-setting such as cost-effectiveness analysis and cost-benefit analysis? Are the ethical commitments of the profession of public health consistent with some methods and not others?

► Should the institution of universal health coverage be guided by ethical precepts and if so, what are these values and how should they guide policy?

► Can and should public health's dedication to improving population health conflict with the priorities of some individuals whose choices to not reflect such high priority for health? Should these individual preferences always be respected? Are there effective strategies that pursue population health in the face of such conflicts while preserving the individual's freedom to make unhealthy choices?

► How should responsibility for poor health be assigned, and what are the ethical implications of this assignment for poor health due to health problems due to smoking, obesity, and other unhealthy behavior? To the extent that the socio-economic health gradient reflects differences in how well people take care of themselves are these disparities in health individual failings rather than social injustices?

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. This course serves as an introduction to ethical issues in the practice of public health. Students will identify a number of key ethical issues and dilemmas arising in efforts to improve and protect population health and will become familiar with the principal arguments and evidence supporting contesting views. The class aims to enhance the students' capacity for using ethical reasoning in resolving the ethical issues that will arise throughout their careers.

Unlike courses in medical ethics, which mainly examine ethical dilemmas facing individual clinicians, the population-level focus of this course directs our attention to questions of ethics and justice that must be addressed at the societal level.

These include:

► What social response is required of a just society to the needs of its members for protecting and restoring health?

► Is population health something other than the aggregate of the health concerns of the individuals who make up a society at a given time? And what are the ethical implications of the answers?

► When are inequalities in health inequitable, and what priority should be assigned to reducing disparities in health when pursuing this goal might compromise the effort to maximize population health?

► Which ethical choices, if any, are unavoidable in developing the methodologies for measurement of health and of the global burden of disease?

► Which ethical choices if any are unavoidable in developing and using methods for priority-setting such as cost-effectiveness analysis and cost-benefit analysis? Are the ethical commitments of the profession of public health consistent with some methods and not others?

► Should the institution of universal health coverage be guided by ethical precepts and if so, what are these values and how should they guide policy?

► Can and should public health's dedication to improving population health conflict with the priorities of some individuals whose choices to not reflect such high priority for health? Should these individual preferences always be respected? Are there effective strategies that pursue population health in the face of such conflicts while preserving the individual's freedom to make unhealthy choices?

► How should responsibility for poor health be assigned, and what are the ethical implications of this assignment for poor health due to health problems due to smoking, obesity, and other unhealthy behavior? To the extent that the socio-economic health gradient reflects differences in how well people take care of themselves are these disparities in health individual failings rather than social injustices?

Ethical Basis of the Practice of Public Health (190768)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 71

Provides students with a broad overview of some of the main ethical debates in public health policy. Helps students develop their own capacities to analyze, criticize, evaluate, and construct policy-oriented arguments. Introduces utilitarianism and competing moral theories and the strengths and weaknesses of each. Students in this course will survey some of the principal ethical controversies in contemporary public health. An overarching question will be Why not utilitarianism"--for example, why not prioritize those likeliest to survive during mass casualty? Why not simply maximize QALYs when deciding which drugs to fund? Why not use coercive or paternalistic policies whenever they would promote health? Since public health focuses on the health of populations, not individual healthcare, these controversies differ from familiar controversies in clinical bioethics, and bear resemblance to ones in political philosophy and economics. The instructors, an economically-trained physician and a philosopher, will explore this newer field along with the class.

Topics discussed in the course:

- **Introduction and ethical dilemmas of disaster triage**
- **The notion of population-level bioethics**
- **Utilitarianism and other moral theories**
- **Universal coverage in low- and middle-income countries**
- **Priority setting in public health**
- **Inequality and Health**
- **Personal responsibility for health**
- **Rose?ÇÖs Paradox: Prevention or Treatment?**
- **Burden of disease: ethical issues**
- **Distributing "human resources for health"**
- **Paternalistic public health policy**
- **Medical surveillance and privacy**
- **Issues in vaccination**
- **Theories of justice and health**

Introduction to the Practice of Global Health (190773)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

What is the definition of global health? What are its historic roots and modern manifestations? What are the major contemporary issues and debates on policies and practices? These questions are introduced in this introductory course that defines the scope of the field, highlights contemporary issues, and reviews selected case studies of global health policies and practices. An examination of world health and development sets the stage for subsequent sessions including: burden of disease; primary health care; the global fund for HIV/AIDS, malaria, and tuberculosis; the emergence of chronic diseases; the pharmaceutical industry; the role of NGOs and their impact on policy; and disaster management in an interconnected world. Case studies are used throughout course and participants will address critical elements in program implementation.

Financing Health Care in Developing Countries (190783)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 71

This course provides a comprehensive survey on the major health care financing options for developing countries. It begins with introduction of system diagnostic criteria such as equity and efficiency, as well as assessment tools such as the National Health Account technique. Drawing on economic theory and international experiences, the course analyzes strengths and weaknesses of alternative approaches to healthcare financing, including tax-based financing, social insurance, user fee financing, community financing and other innovative financing methods. The aim is to prepare students for applied work in policy and operational analysis related to health financing. This course makes extensive use of country case studies.

Justice and Resource Allocation (190793)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 76

This course explores the ethical issues, especially issues of distributive justice, raised by health and health care resource allocation methodologies and decisions. We begin with examination of distributive issues raised by measures of summary population health and their extensions into cost effectiveness analysis, paying special attention to the strengths and weaknesses of the underlying welfare economic and utilitarian assumptions. Philosophical and empirical efforts to clarify our beliefs about these distributive issues and our commitments to them will also be discussed. We then turn to recent efforts to make health inequalities and inequities a focus of priority in resource allocation, examining both conceptual and moral issues raised by different approaches to such inequalities and by the fact that the distribution of health is so significantly affected by non-health sector factors. We take up two problems of cross-cutting interest, the different concern shown for identified versus statistical victims, and emerging issues about intergenerational equity concerning the elderly and young. Finally, we turn to fair decision process as a way of resolving disputes about allocation. The goal of the course is to equip students with the ethical basis for addressing resource allocation issues in practical public health contexts, and throughout the course there is a focus real cases where controversy surrounds such decisions.

Ethics and Health Disparities (190813)

Instructor TBD

2016 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

When is an inequality in health status an injustice or inequity? This course examines various aspects of this issue, bringing appropriate perspectives from ethical theories (utilitarian, libertarian, liberal egalitarian, feminist) to bear on case studies revealing a range of important health disparities. Four main cases will be discussed, each focusing on a central type of health disparity: U.S. racial disparities, class disparities, gender disparities in a developing country setting, and global health inequalities. Key questions to be pursued in each case include: when is an inequality in health between this type of demographic variable unjust? When is a policy that produces, or fails to address, such an inequality race- or gender- or class-biased in an morally objectionable way? What ethical issues are raised by different methods of measuring health inequalities? How does ascription of responsibility for health affect the fairness of health inequalities? What kind of obligations exist to address health inequalities across national boundaries? What ethical issues are raised by policy approaches to addressing health inequalities and giving priority to reducing them?

Managing Community Health Centers (190819)

Instructor TBD

2013 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

Students in this course will learn about the management of community health centers (CHCs), non-profit organizations that provide primary care and population-based health services for vulnerable populations across the United States. Health centers currently serve over twenty million Americans, most of them low income and from ethnic or racial minorities. The course will enable students to see public health in action, at the local level in the Boston area where health centers provide care for approximately one-half of city residents. Facility staff, as well as HSPH faculty, will be leading discussions.

Students will learn about the history of community health centers, as well as their place in current health policy debates. They will also learn about governance, financial, human resources and quality challenges, as well as health center programs related to community development and domestic violence. They will be exposed to real world" successes as well as failures. This course will take a more applied approach than found in most HSPH courses.

Many graduates of HSPH professional programs have pursued careers in community health centers, often as Medical or Executive Directors. Students in the following departments will be especially interested in this course: Health Policy and Management; Global Health and Population; and Society, Human Development and Health.

Course note: All classes will be held off-site at the Health Centers.

Innovation and Global Health Systems (190829)

Rifat Atun

2020 Fall (2.5 Credits)		**Schedule:**	MW 0345 PM - 0515 PM
Instructor Permissions:	None	**Enrollment Cap:**	40

This course examines innovation from a systems perspective. Aimed at high level practitioners interested in leadership roles in the public, private, nonprofit and multi/bi-lateral arenas, the course will take the form of a structured discussion-based seminar. Objectives are to gain foundational knowledge on health systems thinking and innovation through cross-cutting themes, case studies and enabling ecosystems. Throughout, high-level leaders will join the course, providing an opportunity for students to gain a deep understanding of respective areas of expertise. Because of the importance of exposing future practitioners and leaders to current innovators in the field of health systems, approximately 40% of the sessions for this course will be facilitated by outside faculty and speakers.

Integrating Seminar I (190473)

John McDonough

Peter Berman

2017 Spring (5 Credits) **Schedule:** R 1230 PM - 0320 PM

Instructor Permissions: None **Enrollment Cap:** 26

This course is intended to assist students in processing and synthesizing competencies and knowledge taught in the DrPH program through methodical, integrated application to real-world health challenges. The course will also provide a structured method for defining, researching, analyzing, designing and evaluating responses to complex, intractable public health problems. Teaching methods in this course will include lectures, class discussion, readings, group work, team presentations, team memos, and critique from peers, instructors, and outside experts.

At the completion of the course the student will be able to:

- Apply a methodical analytical approach to addressing a wide range of public health challenges, using knowledge and skills gained in previous DrPH coursework
- Define and frame a public health problem - justify why an issue is a "problem" that deserves attention
- Carry out background research on the problem, identify knowledge gaps and research needs
- Identify or design alternative approaches to addressing the problem, and evaluate those alternatives using clearly-defined criteria and methods, including projecting outcomes of various alternatives
- Choose, defend, and plan the implementation of a recommended course of action
- Design a plan to monitor & evaluate implementation
- Communicate publicly on the problem and recommendations

- Understand how to apply previous coursework, while identifying high-priority gaps in knowledge and skills that may be addressed in the remainder of the DrPH program.

Course Restricted: DrPH only

Health Policy & Management 203 Section: 1

Personal Productivity (190520)

Instructor TBD

2014 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 25

This course on personal productivity is designed to help you do more in less time and thereby achieve a better work-life balance. The course begins with sessions on how to set priorities for different time periods and most efficiently carry out your large projects. Second, it explores various constraints on your personal productivity -- both internal (e.g., procrastination) and external (meetings). Third, it teaches you how to delegate functions more effectively to your team, and how to deal with the demands-needs of your boss. Finally, it helps you improve the key personal skills for being productive--reading, writing and making presentations.

The course requires a high degree of student participation. It relies heavily on case studies, group exercises and role plays. The grade will be based 20% on class participation and the remainder on a series of short papers. There will be no exams in this course.
Course Restricted: DrPH only

Economics for Health Policy (190527)

Anna Sinaiko

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 60

Students will learn how to analyze important health policy issues through the application of basic economic principles. No previous economics training is required. The course will begin with an introduction to the U. S. health care system because we will be using examples drawn almost exclusively from the American context. The concepts we will be learning, however, are widely generalizable and students whose interests and experiences extend beyond the U.S. are welcomed. Among the topics we will discuss are health insurance coverage, benefit design, physician payment incentives, public reporting of quality information, and the pharmaceutical industry.

Health Policy & Management 209 Section: 1

Economics for Health Policy (190527)

Instructor TBD

2012 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

This course has limited enrollment. Prerequisites and faculty approval are required.

Students will learn how to analyze important health policy issues through the application of basic economic principles. No previous economics training is required. The course will begin with an introduction to the U. S. health care system" because we will be using examples drawn almost exclusively from the American context. The concepts we will be learning, however, are widely generalizable and students whose interests and experiences extend beyond the U.S. are welcomed. Among the topics we will discuss are health insurance coverage, benefit design, physician payment incentives, public reporting of quality information, and the pharmaceutical industry.

United States Health Policy (190528)

John McDonough

2020 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 85

This course will provide students with a basic and thorough understanding of the U.S. health system focusing on access, quality of care, and costs. Students will learn how the system and its most important sub-elements are structured, how care is organized, delivered, and financed, and how national health reform is influencing the future direction of the system. Students will write five policy memos concerning immediate and real-world U.S. health policy issues.

The Health Care Safety Net & Vulnerable Populations (190529)

Benjamin Sommers

2020 Fall (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 35

This course examines U.S. health policy for vulnerable populations. We will analyze several key components of the health care safety net for poor American: Medicaid, the Affordable Care Act, community health centers, public hospitals, and unique state-based programs for low-income families. We will also explore issues related to the health care of special populations including Native Americans, immigrants, the homeless, and prisoners. We will draw on a variety of materials and learning approaches, such as research articles, case studies, newspaper editorials, and a classroom policy debate. No previous coursework required, but class participation and discussion are essential.
Priority given to: Due to limited class size, Health Policy & Management students will have first priority for enrollment. Students from other departments are invited to waitlist by application only: please send a one paragraph statement (no more than 300 words) describing why you are interested in this course and any other special circumstances you would like the professor to be aware of. The statement should be emailed to bsommers@hsph.harvard.edu and/or submitted directly as part of your enrollment petition to the Registrar by September 11th, 2020; applications received after that date will still be considered but on first-come, first-served basis.

Public Health Law (190531)

Ameet Sarpatwari

2021 Spring (2.5 Credits) **Schedule:** R 0530 PM - 0820 PM

Instructor Permissions: None **Enrollment Cap:** 50

The course is designed to provide students with an overview of what public health law is; why it matters to public health practitioners and providers; and how the law can be used to change health outcomes. Among the questions explored are:

1. What authority does the government have to regulate in the interest of public health?

2. How are individual rights balanced against this authority?

3. How can criminal statutes, civil litigation, and patent law be used to promote or negatively affect public health?

The course investigates these issues as they operate a range of specific contexts in public health and

medical care, including communicable disease prevention and control, insurance coverage, mental and reproductive health care, pharmaceutical marketing, and tobacco cessation and lead abatement. The course touches on constitutional law, criminal law, tort law, and intellectual property law. Instruction is through interactive lectures with significant amount of class discussion. Most classes will revolve around two to three legal cases.

Course Note: No previous background in law is needed.

Registration Note: Priority is given to MPH45-HP students

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Public Health Law (190531)

Ameet Sarpatwari

2018 Spring (2.5 Credits) **Schedule:** R 0530 PM - 0820 PM

Instructor Permissions: None **Enrollment Cap:** 65

The course is designed to provide students with an overview of what public health law is; why it matters to public health practitioners and providers; how the law can be used to change health outcomes; and how the law can negatively affect population health. Among the questions explored are:The course is designed to provide students with an overview of what public health law is; why it matters to public health practitioners and providers; how the law can be used to change health outcomes; and how the law can negatively affect population health. Among the questions explored are:

1. What authority does the government have to regulate in the interest of public health?

2. How are individual rights balanced against this authority?

3. How can criminal statutes, civil litigation, and patent law be used to promote or negatively affect public health?

The course investigates these issues as they operate a range of specific contexts in public health and medical care, including the control and prevention of HIV/AIDS and other communicable diseases, influencing health behaviors that lead to obesity, rights to medical care, reproductive health, and lawsuits against tabacco and gun companies. The course touches on constitutional law, criminal law, tort law, and intellectual property law. Instruction is through interactive lectures with significant amount of class discussion. Most classes will revolve around two to three legal cases.

Course Note: No previous background in law is needed.

Registration Note: Priority is given to MPH45-HP students

Requirements: **HSPH: HSPH Degr + PHD Stu**

Public Health Law (190531)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 50

This course examines the many ways in which the law impacts the public health. Among the questions explored are: What authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the promises and pitfalls of using laws and litigation to achieve public health goals? The course investigates these issues as they operate a range of specific contexts in public health and medical care, including the control and prevention of HIV/AIDS and other communicable diseases, influencing health behaviors that lead to obesity, rights to medical care, reproductive health, and lawsuits against tobacco and gun companies. The course emphasizes constitutional law, but also touches on criminal law, tort law and intellectual property law. Instruction is through interactive lectures with a significant amount of class discussion. Most classes will revolve around two to three legal cases. The previous year's syllabus is available on the course website.

Consumers, Corporations and Public Health (190544)

John Quelch

2017 Spring (2.5 Credits) **Schedule:** MTW 0830 AM - 0950 AM

Instructor Permissions: None **Enrollment Cap:** 50

With 18 percent of U.S. GDP now allocated to health care, it is essential for all businesspeople to have some familiarity with the health care system. This half-credit course examines how corporations aid and, in some cases, impede the solving of public health challenges. Targeting MPH and MBA students, the course aims to promote dialogue and understanding between public health and business professionals. Common ground can be found when we use a deep understanding of consumer behavior as the starting point for debate and collaboration.

The course is organized in seven modules:

- **Corporate Strategy and Public Health**
- **Employee Safety, Wellness and Productivity**
- **Prevention and Adherence**
- **Consumer Access and Affordability**
- **Data Analytics and Health Care Strategies**
- **Consumerism and Paternalism**
- **Emerging Markets, Consumer Behavior and Public Health**

All classes include recently-written case studies as the basis for learning. Accordingly, grades will be based 50 percent on class participation (attendance, punctuality, participation and performance). The remaining 50 percent of the grade will be a take-home exam.

Class Notes: **Scheduling Note: Classes will be held January 23, 2017 through March 10, 2017, Mondays (except Feb 20), Tuesdays (except Jan 24) and two Wednesdays, January 25 and February 15 at 8:30-9:50 AM on the Harvard Business School campus in Hawes 1010**

Note: Given that the course materials for HPM226 will be centrally distributed through the HBX materials office, students registered for HPM226 will have a $100 fee applied to their term bills.

Registration Note: Priority goes to DrPH students.

Managing People in Health Care Organizations (190548)

Instructor TBD

2014 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

Health care is a labor-intensive industry; human resource costs account for over 70% of the U.S. health care budget. At some point in their careers, most HSPH graduates will be responsible for directing the work activities of other people. In this course, they will learn basic strategies and tactics for achieving maximum productivity and contentment from employees in health care settings.

The course will examine all the critical managerial challenges along the employment continuum, from Recruitment and Hiring through Performance Appraisal to Layoff or Firing. We will learn about the human desires that Motivate Behavior and how to take advantage of them in the workplace. The skills and traits associated with Effective Leadership will be studied. These include the important talents of Delegating to Subordinates and Handling Employee Problems.

In the most exciting part of this course, students will become familiar with state-of-the-art managerial concepts like Organizational Culture, Managing Change, and Learning Organizations. We will spend time learning how Teams form and function in a health care setting, especially when composed of multiple disciplines. People management increasingly must take place in a Patient-Centric work environment, and we will talk about how to make that work.

One class will be devoted to the role of Compensation in managing people, particularly the current hot topic of Pay-for-Performance. During another session, we will explore the differences in Managing Professionals like nurses and doctors; and what happens when nurses and doctors become managers? The aspects of Sexual Harassment and Substance Abuse unique to health care organizations receive focused attention along with the Law and Ethics of employment decisions. Throughout all of this, students will learn how they can ?Ç£create value?Ç¥ through their people management skills.

The learning style in this course involves a lot of dialogue among students and the instructor, case studies, and role plays. We will use simulations to get a taste of real world challenges in managing people.

Your career will be enhanced through the skills you learn in this course.

Those wishing to audit this course must first contact the instructor.

Competitive Strategy (190549)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

Focuses on the conceptual framework needed to plan for the long-term viability of health care (and other) organizations. Using selected readings and case studies of health care organizations, students will learn to appreciate key strategic concepts such as environmental analyses, strategic planning, and balanced scorecards, primarily through practice in analysis. The objective is to provide students with the conceptual tools and the practical skills to enable them to formulate, evaluate, and implement organizational strategy.

Healthcare Organizations and Strategy (190549)

Mariam Atkinson

2021 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 50

Successful organizations are led by people capable of managing decisions with important tradeoffs and implications for long-term viability. Using selected readings and case studies of healthcare organizations, students will be able to think critically about real-life, classical examples of organizations dealing with strategic decision point dilemmas. We will focus on strategy as a way of thinking about organizational challenges and potential solutions, using tools such as environmental analysis, internal analysis, ethical

decision-making, and organizational design and strategy implementation. Since this course emphasizes foundational theories and concepts in strategy, it is intended for those with no/limited strategy exposure.

Registration Note: First priority is to HPM students (MPH Health Management and MPH Health Policy)

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM

Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM

Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

HSPH: Course Category	Category 3: Essential Course
HSPH: Course Material Fee Tier	< $75
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Indpt. Study / Research	NO

Health Policy & Management 231 Section: 1

Competitive Strategy (190549)

Mariam Atkinson

Nancy Kane

2017 Fall (2.5 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 65

Focuses on the conceptual framework needed to plan for the long-term viability of health care (and other) organizations. Using selected readings and case studies of health care organizations, students will learn to appreciate key strategic concepts such as environmental analyses, strategic conceptual tools and the practical skills to enable them to formulate, evaluate, and implement organizational strategy.

Registration Note: First priority is to HPM students (MPH Health Management and MPH Health Policy)

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
HSPH: Course Material Fee Tier	< $75

Health Policy & Management 231 Section: 1

Competitive Strategy (190549)

Mariam Atkinson

Nancy Kane

2019 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 67

Focuses on the conceptual framework needed to plan for the long-term viability of health care (and other) organizations. Operations Management in Service Delivery Organizations (190550)

Eugene Litvak

2021 Spring (2.5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 44

Operations management is concerned with evaluating the performance of operating units, understanding why they perform as they do, designing new or improved operating procedures and systems for competitive advantage, making short-run and long-run decisions that affect operations, and managing the work force. To understand the role of operations in any organization, a manager must understand: process analysis, capacity analysis, types of processes, productivity analysis, and the role of operating strategy in corporate strategy. Case studies will be used to introduce students to a wide range of practical operational issues in healthcare delivery. Students will also be introduced to a new variability based methodology and to the quantitative techniques to reduce cost while maintaining or even improving quality of care. Problem oriented software will be used for some of these scenarios.

Registration Note: Priority goes to MPH45-HM and MPH65-HM students

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Managing Health Care Costs (190553)

Jeff Levin-Scherz

2021 Spring (2.5 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 67

Health care costs continue to be high in the United States, and the high cost of health care crowds out other societal needs while the US health care system appears to deliver less value than many other health care systems. Health care costs are a challenge for individuals, for employers, and for government. The Affordable Care Act led to a substantial increase in the number of Americans with insurance, although it is likely that the health market will undergo substantial changes over the coming months and years. The biggest challenge has been how to lower the cost of health care without diminishing quality or innovation.

We will review the advantages, disadvantages and feasibility of different approaches to moderating rising costs, including benefit design, medical management, utilization review, provider profiling and reporting, information technology, and regulatory action. We will also review efforts to improve health care affordability in other countries, although the main focus of the course is the US health care system.

Students will be encouraged to develop their own critical assessment of the prospects of using these techniques to control health care spending and to improve access and quality of care. Guest speakers will provide a first-hand perspective on some topics. Students will design a business plan for an intervention to lower health care costs for the final group project.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Managing Health Care Costs (190553)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

Health care inflation in the United States--and in many other countries--has consistently exceeded overall inflation and employers, government, and individuals are increasingly reluctant to pay increasing amounts for health care coverage. Employer-based health care coverage has diminished, and escalating health care costs threaten other important programs of local and state governments. Forecasters estimate that the Medicare Trust Fund will be depleted long before the Social Security Trust Fund, suggesting that Medicare will require substantial cuts or additional governmental subsidies. Now that health care reform legislation is being implemented, attention has turned to the task of decreasing health care inflation while not diminishing quality or innovation.

This course will use lectures, case studies and a simulation to examine the major factors that determine the cost of health care in the United States, and the impact of these forces on system stakeholders. We will review the fundamentals of managed care, with a focus on some of the practical challenges and major public policy issues that arose with the growth and decline of managed care. We will review the advantages, disadvantages and feasibility of different approaches to moderating rising costs, including benefit design, medical management, utilization review, provider profiling and reporting, information technology, and regulatory action. We will also review efforts to improve health care affordability in other countries although the main focus of the course is the US health care system. Data Analysis for Professionals (190560)

Susan Madden

Louise Keogh Weed

2018 Spring (2.5 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 50

There is an enormous amount of data generated and collected in healthcare organizations. Much of it is of variable quality but must still be used to inform management decisions, as well as to report to boards, government regulators, insurers, and other organizational stakeholders. In this course, students will gain practice in managerial analysis of data: learning to ask appropriate questions, evaluating the adequacy of the data available, performing simple analytic techniques in Excel, drawing conclusions that inform decision-making, and reporting results to relevant audiences.

This course will focus on analyzing data to support typical management decisions that require making sense of available information. Using short cases with data sets, students will be asked to "make sense of the data" in light of the problem management is trying to address. The primary course objective is to advance practical analytic skills through application of quantitative concepts to real-world problems. Other objectives include information-based decision-making - how does one come to a decision after analyzing imperfect data - and presentation of data in a way that effectively communicates and supports the decision-making process. The course will use Excel, and assumes no previous programming or applied statistical background beyond what is taught in the MPH core requirements.

The course fulfills the data analysis requirement for MPH-65 Health Management students.

Course Note: Priority given to MPH-65 HM students.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Data Analysis for Professionals (190560)

Amy Cohen

Susan Madden

2017 Spring (2.5 Credits) **Schedule:** MW 1030 AM - 1220 PM

Instructor Permissions: None **Enrollment Cap:** 48

The ability to analyze and interpret data is an increasingly important professional skill for public health professionals. Using data--whether for research studies, management, quality improvement efforts, or policy development--lies at the heart of many public health and medical activities, and is key to a successful career in public health.

In this course, students will gain data literacy through guided experiential learning. They will have opportunities to analyze public health, population management, and administrative data and to deepen their understanding of the analytic skills they will need as public health professionals as practitioners and decision-makers, in roles where they will be contributors to or consumers of data-driven knowledge. These learning goals will be supported with practical, hands-on data analysis experiences.

We will use JMP statistical software, which is available free to Harvard students for their own computers, in both Mac and Windows versions. JMP is also installed in all HSPH computer labs. JMP features a point-and-click interface and dynamic and interactive graphics for data exploration and communication, and integrates well with Excel. It is strongly recommended that students bring their own laptops for hands-on activities, but laptops will also be available to borrow during class.No previous experience is required.

Course Note: Priority given to MPH-45 HM, MPH-65 HM students

Course Prerequisite(s): BIO200 or BST201 or BST202 or BST203 or BIO/BST206 or BIO/BST207 or BIO/BST208 or ID201

Public Health Meta-Leadership through Crisis and Change Skills (190563)

Leonard Marcus

Eric McNulty

2021 Spring (2.5 Credits) **Schedule:** MTWRF 0830 AM - 0520 PM

Instructor Permissions: Instructor **Enrollment Cap:** 48

Many T.H. Chan graduates eventually find themselves in significant public health leadership positions. The COVID-19 experience has underlined the importance of crisis leadership for those at the front lines of public health. These leadership roles provide the opportunity to initiate significant change and progress – to make a difference - on critical public health issues and problems. . This course provides you the opportunity to learn the key leadership lessons. The text used for the course is authored by the instructors: "You're It: Crisis, Change and How to Lead When It Matters Most."

For students who aspire to such responsibilities, this course provides a focus and framework to integrate your overall HSPH experience into your public health leadership trajectory. The week builds upon the concepts of "meta-leadership" and its widely oriented practices. The topics range from developing a better understanding for who you are as leader - with your strengths and weaknesses - as well as analytic strategies to better link leadership vision to organizational operations and logistical progress. You will find that you integrate your overall T.H. Chan learning into your leadership focus, with methods and strategies for evidencebased situational awareness incorporated into your leadership profile. You will also find that you are better oriented and capable to generate connectivity of effort among people and organizations rallied to coalesce around critical public health priorities.

Students are encouraged to explore and develop their leadership passion which links to progress on matters of population health importance. The class has a very active and engaging learning laboratory format, including a combination of lecture, discussion, role play exercises and on-the-spot presentations

and feedback by instructors and fellow students. It will draw on relevant recent and current events including the COVID-19 pandemic. Over the course of the week, students are active in developing a learning community, experiencing its evolution and applicability to leadership roles they assume over their career.

Note: Enrollment limited to 48 students. Instructor's permission required, but do not contact instructors directly. To receive permission, students must submit a brief essay. This essay should briefly addressing your professional background, reason for wishing to take the course, and your plan for using the skills gained.

Enrollment Note: Only accepted students will be permitted to enroll. Once enrolled, if a student subsequently decides to drop the course, they must submit a petition seeking permission to drop.

Enrollment Requirements: If you are interested in applying for this course, please fill out this survey: https://harvard.az1.qualtrics.com/jfe/form/SV_eybkAA87jUiUKeV which includes an essay of no more than 2 paragraphs. This essay is, due by Friday, November 13, 2020 at 5 p.m.. Starting on November 16, you will be notified if you've been accepted into the course. At that time, you will be asked to commit to the course, since a late drop denies the course to another interested student.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. Many T.H. Chan graduates eventually find themselves in significant public health leadership positions. These leadership roles provide the opportunity to initiate significant change and progress on critical public

health issues and problems. For students who aspire to such responsibilities, this course provides a focus and framework to integrate your overall HSPH experience into your public health leadership trajectory. The week builds upon the concepts of "meta-leadership" and its widely oriented practices. The topics range from developing a better understanding for who you are as leader - with your strengths and weaknesses - as well as analytic strategies to better link leadership vision to organizational operations and logistical progress. You will find that you integrate your overall T.H. Chan learning into your leadership focus, with methods and strategies for evidence-based situational awareness incorporated into your leadership profile. You will also find that you are better oriented and capable to generate connectivity of effort among people and organizations rallied to coalesce around critical public health priorities. Students are encouraged to explore and develop their leadership passion which links to progress on matters of population health importance. The class has a very active and engaging learning laboratory format, including a combination of lecture, discussion, role play exercises and on-the-spot presentations and feedback by instructors and fellow students. Over the course of the week, students are active in developing a learning community, experiencing its evolution and applicability to leadership roles they assume over their career.

Note: Enrollment limited to 48 students. Instructor's permission required, but do not contact instructors directly. To receive permission, students must submit a brief essay. This essay should briefly address your professional background, reason for wishing to take the course, and your plan for using the skills gained.

Enrollment Note: Only accepted students will be permitted to enroll. Once enrolled, if a student subsequently decides to drop the course, they must submit a petition seeking permission to drop.

Class Notes: **If you are interested in applying for this course, please fill out this survey (https://harvard.az1.qualtrics.com/jfe/form/SV_77J9hFVbxdD8dNP), which includes an essay of no more than 2 paragraphs. This essay is due by November 3rd at 5pm. Before Thanksgiving, you will be notified if you've been accepted into the course. At that time you will be asked to commit to the course.**

Requirements: **HSPH: HSPH Degr + PHD Stu**

Political Analysis and Strategy for U.S. Health Policy (190565)

Robert Blendon

2020 Spring (5 Credits) **Schedule:** MW 0415 PM - 0600 PM

Instructor Permissions: None **Enrollment Cap:** 80

Health policymaking in the U.S. has a strong political dimension. This course offers analytical insights into understanding U.S. health policymaking and developing political strategies that influence health policy outcomes. The course provides both the theoretical basis and strategic skills for those in future leadership roles to influence the health policy process. Major topics to be covered include analyzing how health policy is shaped by interest groups, media, public opinion, legislative lobbying, elections, coalition building, policy legacies, institutions, and the politics of information. Student-led case studies focus on marijuana legalization in Colorado and de-funding Planned Parenthood, as well as major movements toward comprehensive national health insurance in the U.S. including the Clinton and Obama health plans and the debate over the implementation of the Affordable Care Act. Leaders in political strategy from both the health and political fields will be guest lecturers.

Course note: Cross-listed with SUP-575; HSPH students must register for HSPH course. This course is not open to auditors.

Registration Note: Priority goes to DrPH, MPH45-HP and MPH65-HP students.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HP, MPH65 HP, DRPH, HPM SM1

Wave 2 | MPH45 HM, MPH65 HM & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/16/2020 01:00PM – 1/21/2020 11:59PM

Wave 2 | 1/22/2020 12:00AM – 1/23/2020 11:59PM

Wave 3 | 1/24/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Health Policy & Management 247 Section: 1

Political Analysis and Strategy for U.S. Health Policy (190565)

Robert Blendon

2017 Spring (5 Credits) **Schedule:** MW 0415 PM - 0600 PM

Instructor Permissions: None **Enrollment Cap:** 88

Health policymaking in the U.S. has a strong political dimension. This course offers analytical insights into understanding U.S. health policymaking and developing political strategies that influence health policy outcomes. The course provides both the theoretical basis and strategic skills for those in future leadership roles to influence the health policy process. Major topics to be covered include analyzing how health policy is shaped by interest groups, media, public opinion, legislative lobbying, elections, coalition building, policy legacies, institutions, and the politics of information. Student-led case studies focus on marijuana legalization in Colorado and de-funding Planned Parenthood, as well as major movements toward comprehensive national health insurance in the U.S. including the Clinton and Obama health plans and the debate over the implementation of the Affordable Care Act. Leaders in political strategy from both the health and political fields will be guest lecturers.

Course note: Cross-listed with SUP-575; HSPH students must register for HSPH course. HPM 247 will now only be taught on the Harvard Kennedy School of Government campus. It will no longer be offered on alternating years at HSPH. This course is not open to auditors.

Registration Note: Priority goes to DrPH, MPH45-HP and MPH65-HP students

Class Notes: **This course will meet at the Harvard Kennedy School, Littauer Building 140.**

Social Entrepreneurship and Innovation Lab (SE Lab) for US and Global Health (190569)

Gordon Bloom

2017 Spring (5 Credits)		**Schedule:**	F 0100 PM - 0400 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	60

Social Entrepreneurship & Innovation Lab (SE Lab) for US and Global Health is a Collaboratory workshop, a university incubator where student teams design and develop innovative U.S. and international social change initiatives, ventures and organizations, addressing major challenges in public health and healthcare.

SE Lab fuses theoretical and practical approaches. It offers an overview of selected concepts and frameworks of social entrepreneurship while concurrently enabling students to develop team based action projects. SE Lab participants collaborate by brainstorming, developing and iterating ideas, and by designing innovative and feasible solutions and plans for the problem and opportunity chosen. Class sessions combine lectures, case discussion, and small group workshops, as well as the participation (in person or electronically) of domain experts, social entrepreneurs, and guest faculty.

SE Lab is student-centered and projects are student-initiated. Proposed initiatives may be new entities or innovative projects, partnerships, or other arrangements that will have an impact on existing organizations and social outcomes locally or globally, focused on issues of public health and healthcare. Students may apply to the lab with a project or idea or simply be interested in joining a team.

Project development will vary with the skill set and experience of each individual and team, but will include: defining the problem and opportunity; articulating mission and vision; design and development of an innovative and feasible solution and determination of an applicable theory of change and value proposition; market research, industry and stakeholder analysis; creation of an advisory, governance and management structure; determination of strategic partners and assets, funding strategy; development of a basic financial and operating model; development of measurement and evaluation framework. Teams will draft an executive summary and SE business plan for their initiative and will present their projects in the SE Lab, and may also create an optional 2 minute video. As appropriate, participants may also elect to pursue funding, and the implementation of a pilot project.

Some examples of the issue areas that students may elect to address through the SE Lab in US and global health include: affordability, access, quality, pandemics and infectious disease, failing health systems and health care system change, health IT, medical device and technology innovation, clean water, environmental health and sustainability, nutrition and food systems, obesity alleviation, chronic disease management, diagnostics, population health management, poverty and humanitarian crises, gender equity and human rights, privacy, maternal and infant mortality, prevention and safety, drug development and distribution, social and behavioral health and substance abuse, education access, international conflict and violence and other issue areas as determined by the students.

Registration Note: Instructor approval is required for registration.

Class Notes: **Course Note: HPM 251 will meet at The Harvard Innovation Lab, Batten Hall (Main Floor classroom), 125 Western Ave., Allston, MA 02163.**

Negotiation (190570)

Linda Kaboolian

2021 Spring (2.5 Credits)		**Schedule:**	TR 1130 AM - 0100 PM
Instructor Permissions:	None	**Enrollment Cap:**	100

The ability to negotiate successfully rests on a combination of analytic and interpersonal skills. Negotiators must execute promising strategies based on their analysis of the multitude of factors that affect the negotiation and that structure the definition of a successful outcome.

Among these issues are the context and the structure of the negotiation, the interests of the other parties, the opportunities and barriers to creating and claiming value on a sustainable basis, and the range of possible moves and countermoves both at and away from the bargaining table, the value of the relationships, personal goals and ethical considerations.

Interpersonal skills are important because negotiations are interactions with counterparts. Effective negotiators influence the behavior of other parties, correctly read the actions, intentions and preferences of counterparts, communicate their own perspectives and intentions well, and are aware of and can correct for their own cognitive and emotional biases. Strong interpersonal skills make it possible to execute one's own strategy and react to moves by counterparts effectively.

This course will present conceptual frameworks that will help you analyze negotiations in general and prepare more comprehensively for future negotiations in which you may be involved. In class analysis of case studies and readings from applied game theory, social psychology, political theory and behavioral economics, we will draw out lessons from ongoing, real-world negotiations. Through participation in negotiation simulations, you will have the opportunity to exercise your powers of communication and persuasion, and to experiment with a variety of negotiating strategies and tactics. The simulation exercises draw from a wide variety of contexts and their aim is to illustrate concepts and tools that apply to a variety of negotiations settings. In-class debriefs of your experience as well as your outcomes will help you make adjustments in your negotiating practice that better reflect your intentions and preferences.

I hope that in addition to developing a better understanding of strategy, you will learn a great deal about yourself in this course. You will have repeated exposure to situations that involve a shifting mix of opportunities for cooperation and competition as well as important ethical choices. The main pedagogical perspective is to improve your own repertoire of action practice and by reflecting on your practice. As a result, your negotiating effectiveness should increase significantly. Overall, I expect that you will finish the course as an analytically savvy, flexible, efficacious negotiator.

Health Policy & Management 252 Section: 1

Negotiation (190570)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

The ability to negotiate successfully rests on a combination of analytic and interpersonal skills. Negotiators must execute promising strategies based on their analysis of the multitude of factors that affect the negotiation and that structure the definition of a successful outcome.

Among these issues are the context and the structure of the negotiation, the interests of the other parties, the opportunities and barriers to creating and claiming value on a sustainable basis, and the range of possible moves and countermoves both at and away from the bargaining table, the value of the relationships, personal goals and ethical considerations.

Interpersonal skills are important because negotiations are interactions with counterparts. Effective negotiators influence the behavior of other parties, correctly read the actions, intentions and preferences of counterparts, communicate their own perspectives and intentions well, and are aware of and can correct for their own cognitive and emotional biases. Strong interpersonal skills make it possible to execute one?ÇÖs own strategy and react to moves by counterparts effectively.

This course will present conceptual frameworks that will help you analyze negotiations in general and prepare more comprehensively for future negotiations in which you may be involved. In class analysis of case studies and readings from applied game theory, social psychology, political theory and behavioral economics, we will draw out lessons from ongoing, real-world negotiations. Through participation in negotiation simulations, you will have the opportunity to exercise your powers of communication and persuasion, and to experiment with a variety of negotiating strategies and tactics. The simulation exercises draw from a wide variety of contexts and their aim is to illustrate concepts and tools that apply to a variety of negotiations settings. In-class debriefs of your experience as well as your outcomes will help you make adjustments in your negotiating practice that better reflect your intentions and preferences.

I hope that in addition to developing a better understanding of strategy, you will learn a great deal about yourself in this course. You will have repeated exposure to situations that involve a shifting mix of opportunities for cooperation and competition as well as important ethical choices. The main pedagogical perspective is to improve your own repertoire of action practice and by reflecting on your practice. As a result, your negotiating effectiveness should increase significantly. Overall, I expect that you will finish the course as an analytically savvy, flexible, efficacious negotiator.

Improvement in Quality of Health Care (190571)

Charles McCannon

Maureen Bisognano

Pedro Delgado Ghersi

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 77

Improvement in Quality of Health Care is designed for practicing physicians and clinicians and those with an interest in health care management. This interactive and challenging course will provide students with a fresh perspective on improvement in health care systems, and provide them with the necessary tools to effect the kind of real change in their own organizations and practices that can improve outcomes for patients. Topics of the sessions will include: systems thinking; the leadership of improvement; statistical thinking and the management of variation; process knowledge and design; change methods, improvement, and design and creativity; collaborative work; matching service design to needs; personal and professional learning and change; the diffusion of innovations; spreading new methods across organizational silos and boundaries; and work-related psychology and using the patient voice to drive redesign.

Restricted to HSPH degree or PCE students.

Requirements: **Course Restricted: HSPH degree or PCE students.**

Payment Systems in Healthcare (190573)

Elizabeth Seeley

2021 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 69

The admonition "Follow the money" is good advice to anyone seeking a deeper understanding of any health care system. Money is a major tool for shaping the delivery of health care, for both good and ill. This course will follow the money as it flows through provider payment systems, and examine the effects of these flows on those who give, receive and pay for health care. Topics will include current payment methods for hospital care and physicians as well as innovative payment strategies and models under development. Cross-national examples will be used occasionally to gain greater understanding of some of the challenges that face all health care systems in designing successful provider payment systems. Guest speakers will provide a first-hand perspective on selected topics.

Registration Note: Priority registration for HPM students (MPH-HM, MPH-HP, HPM-SM1).

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH45 HM, MPH65 HM, MPH45 HP, MPH65 HP, HPM SM1

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Health Economics with Applications to Global Health Policy (203355)

Meredith Rosenthal

2020 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

Students will learn how to analyze current health policy issues through the application of basic economic principles. No previous economics training is required. The course will begin with an introduction to health economics. The concepts we will be learning are widely generalizable to both industrialized and developing country contexts and students are encouraged to learn from and teach each other about the different health systems of which participants have experience. Among the topics we will discuss are health insurance coverage, physician payment incentives, consumer decision making, and competition.

Diversity and inclusiveness are fundamental to public health education and practice. It is a requirement that you have an open mind and respect differences of all kinds. I share responsibility with you for creating a learning climate that is hospitable to all perspectives and cultures; please contact me if you have concerns or suggestions.

Health Policy & Management 260 Section: 1

Health Economics with Applications to Global Health Policy (203355)

Meredith Rosenthal

2017 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 53

Students will learn how to analyze current health policy issues through the application of basic economic principles. No previous economics training is required. The course will begin with an introduction to health economics. The concepts we will be learning are widely generalizable to both industrialized and developing country contexts and students are encouraged to learn from and teach each other about the different health systems of which participants have experience. Among the topics we will discuss are health insurance coverage, physician payment incentives, consumer decision making, and competition.

Diversity and inclusiveness are fundamental to public health education and practice. It is a requirement that you have an open mind and respect differences of all kinds. I share responsibility with you for creating a learning climate that is hospitable to all perspectives and cultures; please contact me if you have concerns or suggestions.

Class Notes: **Class restricted to MPH-EPI students**

Requirements: **HSPH: HPM 260**

Health Care Information Technology Management (204468)

Mary Finlay

2021 Spring (2.5 Credits) **Schedule:** MW 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 45

This course introduces students to the concepts and knowledge involved in the strategic use of information technology in health care. The course will be a blend between general IT concepts and practical problems facing health care organizations related to the acquisition, use, and management of information technology to assure the safe delivery of quality care in an affordable manner. At the completion of this course, students should be able to:

-Describe how an IT strategy is developed to align with the overall business strategy
-Analyze an IT project and determine the technical and human components that contributed to the success or failure.
-Develop a plan for a system selection, acquisition and implementation.

-Describe emerging technology trends and the likely impact the trends will have on health care delivery

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO

Methods and Tools for Quality Improvement (204466)

Lindsay Martin
William Berry

2020 Fall (2.5 Credits) **Schedule:** F 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 45

Students will learn the fundamental skills of improvement through a mix of presentation, application, and group work. The class will provide a historical overview of different quality methods and then center on the Model for Improvement as the approach for in-depth exploration. In addition to gaining the fundamental skills necessary to participate in quality improvement initiatives, students will earn the components necessary to lead quality improvement. Furthermore, by taking a deep dive into reliability science, students will gain the ability to formulate and create changes that can have a lasting impact in health care, and to build the infrastructure in an organization necessary to accommodate those changes.

Throughout the course students will work in a group on a quality improvement project. The project will be an opportunity to do real-time application of the skills learned in class and will form the basis of the student's grade in the course.

All classes will contain four components: (1) a description of the applicable principles and structures that primarily influence the theory being discussed; (2) an exercise that enables immediate application/practice of the theory taught; (3) an example and/or opportunity to apply the theory in health care; (4) dedicated time to work with a group on an improvement project and get real-time coaching from faculty. Students will be expected to actively engage in all four components of the class.

Class Notes:

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

Methods and Tools for Quality Improvement (204466)

Lindsay Martin

2017 Fall (2.5 Credits) **Schedule:** F 0800 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 45

Students will learn the fundamental skills of improvement through a mix of presentation, application, and group work.The class will provide a historical overview of different quality methods and then center on the Model for Improvement as the approach for in-depth exploration. In addition to gaining the fundamental skills necessary to participate in quality improvement initiatives, students will learn the components necessary to lead quality improvement, including a strong grounding in measurement, culture and leadership. Furthermore, by taking a deep dive into reliability science, students will gain the ability to formulate and create changes that can have a lasting impact in health care and build the infrastructure in an organization to accommodate those changes.

By building charters, planning and running tests of change, and studying results, students will work to improve a system problem. In addition, students will engage in innovation and creativity exercises to begin to practice how to tackle seemingly intractable problems; students will be expected to identify the difference between innovation and improvement and then utilize appropriate technique to address the problem. As much as possible the course will use practice and exercises, rather than lecture and information transfer to help students gain the skills they need to apply improvement knowledge to new situations.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Health Policy and Access to Dental Services (190590)

Instructor TBD

2012 Fall (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 30

This course uses examples and issues such as access to dental care as a strategy for understanding health policy and public health program development and management at the local, state, and national levels. The objectives are: to understand the market for health services and the process of health policy development; to apply the health policy process and community health program planning methods to dental services program development; and to identify possible linkages between the public health system and the (dental) health services delivery system.

Introduction to Methods and Applications in Health Services Research (190591)

Arnold Epstein

Joel Weissman

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 40

Introduction to Methods and Applications in Health Services Research introduces student to the interdisciplinary field of health services research. The course covers theory, methodology, and applications using a highly interactive teaching approach. Individual sessions will be devoted to research design, analyses of large databases, cost-effectiveness analyses, survey methodology, assessment of health status, assessment of quality, measurement of racial, ethnic, and socioeconomic disparities, appropriateness of care, risk adjustment, and statistical techniques pertinent to health services research. There will be one or more sessions reviewing managerial applications such as case management, use of hospital information systems, and targeting for high-risk patients.

The course will also include class sessions and exercises devoted to critique of journal articles. These will supplement didactic presentations and will target development of skills in performing research and writing papers. In the final part of the course, students will work in small groups to critique a grant proposal designed to study an important problem in health services or health policy research. Each group of students will write up their critique in a format typical for a federal study section. This effort is designed to educate students on important aspects of grant writing.

Restricted to HSPH degree or PCE students.

Requirements: **HSPH: HPM276**

Introduction to Methods and Applications in Health Services Research introduces student to the interdisciplinary field of health services research. The course covers theory, methodology, and applications using a highly interactive teaching approach. Individual sessions will be devoted to research design, analyses of large databases, cost-effectiveness analyses, survey methodology, assessment of health status, assessment of quality, measurement of racial, ethnic, and socioeconomic disparities, appropriateness of care, risk adjustment, and statistical techniques pertinent to health services research. There will be one or more sessions reviewing managerial applications such as case management, use of hospital information systems, and targeting for high-risk patients.

The course will also include class sessions and exercises devoted to critique of journal articles. These will supplement didactic presentations and will target development of skills in performing research and writing papers. In the final part of the course, students will work in small groups to critique a grant proposal" designed to study an important problem in health services or health policy research. Each group of students will write up their critique in a format typical for a federal study section. This effort is designed to educate students on important aspects of grant writing.
Course Restricted: Program in Clinical Effectivness participants only (or instructor permission)

Current Issues in Health Policy (190592)

Instructor TBD

2014 Summer (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 70

This course has limited enrollment. Prerequisites and faculty approval are required.

Current Issues in Health Policy introduces students to the major health policy issues facing the United States today. The course focuses on the roles of hospitals, doctors, private and government insurance, and different systems for organizing and financing care (such as traditional fee-for-services, HMOs, and other forms of managed care"). Individual sessions in the course will be devoted to topics such as malpractice, policy issues related to pharmacologic therapy, physician payment, academic health centers, workforce, physician profiling, managed care, the uninsured, Medicare, and Medicaid.

Taken together, the course sessions are designed to provide both a general background of the health care system and knowledge of many of the cutting-edge issues that are on the forefront of the nation's health policy agenda. The course will provide insight into how and why particular health policies are developed. It will focus on what the major policy questions are, and present examples of health services research methodology. However, the course concentrates much more on policy questions than methodological techniques.

Skills & Methods of Health Care Negotiation & Conflict Resolution (190593)

Leonard Marcus

Eric McNulty

2021 Spring (2.5 Credits) **Schedule:** TR 0800 AM - 0930 AM

Instructor Permissions: None **Enrollment Cap:** 67

This course introduces students to the theories and practices of interest based negotiation and conflict resolution. Particular emphasis is on integrating analytic skills, negotiation techniques and conflict resolution methods into students' public health practice took kit. The course builds upon the book compiled by the instructors, "Renegotiating Health Care: Resolving Conflict to Build Collaboration, Second Edition." Based upon examples of conflict artd negotiation facing health systems, students learn how to apply the concepts and methods of "The Walk in the Woods" - a four step process of interest-based negotiation. A portion of the class is devoted to health care and public health simulation exercises in which negotiation concepts and methods are demonstrated and practiced. These exercises model disputes typical of the challenges and problem solving now facing health leaders. The debriefing which follows each exercise offers individual feedback, as well as the opportunity to examine applied issues of organizational communication, system design, and conflict. By the end of the course, students will have knowledge of the overt and covert causes of conflict, concepts for analyzing disputes and a variety of methods useful for preventing, resolving and when necessary, constructively raising conflict.

Class Notes:

A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | MPH45 HM, MPH65 HM, MPH45 HP, MPH65 HP, HPM SM1

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/7/2021 11:00AM – 1/19/2021 11:59PM

Wave 2 | 1/20/2021 12:00AM – 1/21/2021 11:59PM

Wave 3 | 1/22/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Enabling Change Year 1 and 2 (190594)

Instructor TBD

2016 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 27

This course is restricted to DrPH students.

Why are some individuals successful in enabling positive change in public health? The need for public health leadership is great, the challenges are many?Çöhow does one learn to lead? To be a successful public health practitioner students must master competencies related to leadership, management, innovation, and communication.

This course supplements other required courses in the DrPH Enabling Change curriculum. Each week students will be guided through exercises that will allow them to practice critical skills related to these competencies in a safe setting. Exercises and assignments will incorporate concepts covered in prior or concurrent coursework. This course will also prepare students for their field immersions by providing frameworks for team building, consulting skills, and principles of professionalism.

This is a year-long course worth a total of 2.5 credits (1.25 in the fall and 1.25 in the spring). Students must register for both fall and spring sectionsbr>

Enabling Change - Year 2 (190596)

Instructor TBD

2016 Spring (1.25 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 14

Why are some individuals successful in enabling positive change in public health? What applied skills do

they have that allow them to create effective teams, organizations, and coalitions? How do they address the unique field of public health, with its diffuse power structures and multitude of stakeholders? The need for public health leadership is great, the challenges are many?Çöhow does one learn to lead?

To be a successful applied public health practitioner individuals must go beyond traditional public health research skills and methodologies and learn how to enable positive change at four levels of application: within themselves, amongst their team, inside their organizations, and across systems.

Students must also master practical competencies related to leadership, management, innovation, and communication. Students who address these competencies and apply them across each level of application will be the most ready to serve as public health leaders upon graduation.

This course builds upon the Year 1 curriculum and supplements other required courses in the DrPH Enabling Change Curriculum. Each week, students will be guided through exercises that allow them to practice critical skills related to these competencies. Exercises and assignments will incorporate concepts covered in prior or concurrent coursework. This course will also prepare students for their field immersion and DELTA project experiences by providing frameworks for team building, consulting skills, and principles of professionalism.

This course will prepare students to enter the workforce with the skills needed to understand complex organizational dynamics and influence positive change in those organizations.

This course meets only on the Tuesdays below:1/26

Innovative Problem Solving & Design Thinking in Healthcare (204473)

Linda Cyr

2020 Fall (2.5 Credits) **Schedule:** F 0945 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 25

Innovative problem solving is a critical skill for healthcare leaders confronting disruptive change and operating in increasingly complex and fast-paced environments. The capacity to innovate is essential to effectively serving patients, improving outcomes and developing sustainable organizations. Design thinking is a disciplined approach to innovation that focuses intensely on the intersection of human needs and values, technical feasibility and strategic viability to create end-user value and pursue market opportunity. Healthcare organizations such as the Mayo Clinic, Kaiser Permanente and the UK's National Health Service (NHS) as well as Ministries of Health in Denmark and Singapore are turning to design thinking to improve patient care and citizen health.

In contrast to a traditional approach to problem solving that focuses on deciding among known solutions, an innovative approach seeks the best solution possible given available resources, time, and team

competencies. Innovative problem solving maximizes learning to reduce uncertainty by focusing on generation of new alternatives, experimentation, and exploration of multiple solutions.

Learning will occur through a mix of individual and group exercises in class as well as a series of graded and ungraded assignments that enable you to effectively use innovation tools, acquire skills, and adopt mindsets that complement the analytical approaches you have developed in other courses.

Course Note: Priority will be given to MPH HM, MPH HP, and DrPH students.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | MPH65 HMGT, MPH45 HMGT

Wave 2 | All HPM

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Indpt. Study / Research	NO
HSPH: Course Category	Category 3: Essential Course
HSPH: Course Material Fee Tier	< $25

Innovative Problem Solving & Design Thinking in Healthcare (204473)

Linda Cyr

2018 Spring (2.5 Credits) **Schedule:** F 0800 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** 25

Innovative problem solving is a critical skill for healthcare leaders confronting disruptive change and operating in increasingly complex and fast-paced environments. The capacity to innovate is essential to effectively serving patients, improving outcomes and developing sustainable organizations. Design thinking is a disciplined approach to innovation that focuses intensely on the intersection of human needs and values, technical feasibility and strategic viability to create end-user value and pursue market opportunity. Healthcare organizations such as the Mayo Clinic, Kaiser Permanente and the UK's National Health Service (NHS) as well as Ministries of Health in Denmark and Singapore are turning to design thinking to improve patient care and citizen health.

In contrast to a traditional approach to problem solving that focuses on deciding among known solutions, an innovative approach seeks the best solution possible given available resources, time, and team competencies. Innovative problem solving maximizes learning to reduce uncertainty by focusing on generation of new alternatives, experimentation, and exploration of multiple solutions.

The underlying course content was initially developed by Professor Srikant Datar at Harvard Business School in collaboration with top design firms including Continuum, Frog Design, IDEO, LUMA Institute, and Systematic Inventive Thinking.

The upcoming course will apply that content to address critical challenges in healthcare and will comprise six modules:

-Introduction to the Innovative Problem Solving Process
-Clarify- Achieving Deep Patient/Customer Understanding
-Ideate - Breaking Cognitive Fixedness and Generating Ideas
-Develop - Making the Concept Tangible
-Implement - Bringing Innovation into Reality
-Wrap-up - Leading Innovation

Learning will occur through a mix of individual and group exercises in class as well as a series of assignments that enable you to effectively use innovation tools, acquire skills, and adopt mindsets that complement the analytical approaches you have developed in other courses.

Course Note: Priority will be given to HPM SM1, MPH HM, MPH HP, and DrPH students.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Attribute	Value(s)
HSPH: Course Material Fee Tier	< $50

Implementation Research in Health and Healthcare (204739)

Niteesh Choudhry

Joshua Metlay

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 48

The structure of the course is divided into two major sections: (1) idea generation, during which the theory of behavior change at the individual and organizational-level is applied to the understanding of evidence gaps in healthcare delivery to identify potential strategies for optimizing adoption of evidence-based practices, and (2) evaluation methods for assessing the impact of interventions to overcome evidence gaps and the factors that influence their success or failure. Specific tools in both qualitative and qualitative methods approaches will be emphasized, with the course faculty and invited guests providing specific examples from their own work.

Applied Survey Research for Health Policy and Management (212547)

Gillian SteelFisher

2021 Spring (2.5 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** 20

Surveys are an essential tool in health policy and management, where it is critical to understand the perspective of patients, physicians and other care providers, as well as the broader public. Surveys are utilized to inform policy and program management design, to track changes over time, and to evaluate policy and program impact.

This course focuses on helping students interested in health policy and management to learn central skills in survey study design, questionnaire development as well as interpretation and analysis. The course will cover multiple modes, including telephone, internet, text, mail and face-to-face surveys. The course welcomes students interested in both domestic and international health policy issues, and will cover methodologies suitable to environments with variable research infrastructure. The course will focus on applied techniques specific to survey development, management and interpretation rather than statistical information related to sampling and analysis of survey data, which is available in other courses. Students will get hands-on experience in questionnaire design and interpretation, as well as the opportunity to develop their own survey-based projects.

Class Notes: **A course materials fee may apply for this course. An upper estimate is listed below, and the final materials fee will be communicated to enrolled students at the beginning of the term. For more information and a list of past years' materials fees for the current semester's courses, please visit the Curriculum Center website.**

Practice and Culminating Experience for Health Policy (MPH65) (190602)

Nancy Turnbull

2018 Spring (1.25 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 30

This is the practicum and culminating experience for students in the MPH65 program in health policy. Students take this course in the spring and the second fall of their program for a total of 2.5 credits (1.25 in the spring and 1.25 in the following fall).

This course allows students to integrate and synthesize the knowledge and skills they are gaining from their coursework, and to apply them to a real world health policy issue or problem. In this course, students will also assess their mastery of program competencies. In the spring, students will explore internship opportunities and decide on a placement for the summer. Working with the course instructor and their summer preceptor, they will develop a project plan and learning objectives for the summer. Students will meet individually with the course instructor and as a group 1-2 times per month to enhance the skills they need to function in a professional public health setting, including gaining a better understanding of their work preferences and strengths, learning about the practice of health policy from experienced practitioners, including Harvard Chan alumni, and engaging in professional self-assessment and critical reflection.

In the fall, students will share their summer internship experience with peers and learn from the experiences of others through an oral presentation and a written report. They will also assess their progress on their mastery of the MPH65 health policy program competencies, and develop a professional development plan.

Course Note: Open only to students in the MPH65 program in health policy, who are required to register for HPM290. The class meets for 1-2 hour sessions twice each month. Fieldwork takes place for 8-10 weeks during the summer, and students will present the results of the summer projects in the fall section of HPM 290.

Class Notes: **This course will be held in Kresge 201 for all meetings except 09/12/2017 and 11/07/2017, when it will be held in Kresge 200.**

Requirements: **HSPH: HPM 290**

Nancy Turnbull

2018 Fall (1.25 Credits) **Schedule:** T 0530 PM - 0700 PM

Instructor Permissions: None **Enrollment Cap:** 30

This is the practicum and culminating experience for students in the MPH65 program in health policy. Students take this course in the first spring and the second fall of their program for a total of 2.5 credits (1.25 in the spring and 1.25 in the following fall).

This course allows students to integrate and synthesize the knowledge and skills they are gaining from their coursework, and to apply them to a real world health policy issue or problem.

In the spring section, students will explore practicum opportunities and decide on a placement for the summer. Working with the course instructor and their summer preceptor, they will develop a project plan and learning objectives for the summer. Students will also enhance the skills they need to function in a professional public health setting, including gaining a better understanding of their work preferences and strengths, learning about the practice of health policy from experienced practitioners, including Harvard Chan alumni, and engaging in professional self-assessment and critical reflection.

In the fall section, students will share their summer practicum experience with peers and learn from the experiences of others at an MPH65 practicum poster session. They will also assess their progress on attaining the MPH65 health policy program competencies, and develop a professional development plan.

Course Note: Open only to students in the MPH65 program in health policy, who are required to register for HPM290. The class meets approximately 8 times in the spring and 6-7 times in the fall. Fieldwork takes place for 8 weeks during the summer, and students will present the results of their summer practicum projects in the fall section of the course.

Requirements: **Course Restricted to MPH-65 HP students**

Applied Research & Practice in HPM (190602)

Instructor TBD

2013 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

Allows students to apply their coursework to concrete problems. Students carry out a research project, perform a policy analysis or conduct a management study on behalf of an individual or institutional sponsor. Students work with sponsors to develop individual projects. Students meet 1 or 2 times per month to discuss progress and hear guest speakers to strengthen practical career skills. At the conclusion of the course, students prepare oral and written reports summarizing their project results.
Course Note: Open only to students in the second year of the two-year Master of Science in Health Policy and Management.
All second-year students in the HPM MS2 program will be required to register for HPM290.
Field work and 1-2 two-hour session each month. Fieldwork takes place for 8-10 hours each week.

Student will receive a grade for the course at the end of the Spring semester.

Applied Research & Practice in HPM (190602)

Instructor TBD

2015 Spring (2.5 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** 67

This is a year-long course worth a total of 5 credits (2.5 in the fall and 2.5 in the spring).

Allows students to apply their coursework to concrete problems. Students carry out a research project, perform a policy analysis or conduct a management study on behalf of an individual or institutional sponsor. Students work with sponsors to develop individual projects. Students meet 1 or 2 times per month to discuss progress and hear guest speakers to strengthen practical career skills. At the conclusion of the course, students prepare oral and written reports summarizing their project results.
Course Note: Open only to students in the second year of the two-year Master of Science in Health Policy and Management.
All second-year students in the HPM MS2 program will be required to register for HPM290.
Field work and 1-2 two-hour session each month. Fieldwork takes place for 8-10 hours each week.

Design of Social Innovation (205505)

Patrick Whitney
Andre Nogueira

2021 Spring (5 Credits) **Schedule:** F 0100 PM - 0430 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The Design for Social Innovation (DSI) is a graduate-level course with a total of maximum 30 students with multidisciplinary background. The course is composed of 15 sessions.

Students will be introduced to a set of design frameworks and methods from the Whole View Model (WVM) that are useful for dealing with complex ambiguous problems. They will apply parts of the model to public health issues and explore purpose-driven innovations that integrate considerations of economic principles, user experiences, and

appropriate technology. The model is explained in the journal articles mentioned below.

Each semester students will be exposed to a different set of topics, varying from urban development, preparedness for epidemics, climate change, and racism. Between group projects and individual work, students will be involved in diverse activities including identifying patterns in the daily life, reframing problems, using early stage concept prototypes, creating concepts, designing flexible systems, and other design practices.

By the end of the semester, students will have learned how to apply several frameworks and methods to sketch both descriptive and prescriptive Whole Views of public health conceptual interventions, considering the relationships between organizational strategy, operations, and offerings. In addition to activities related to developing Whole View Models and learning how to work collaboratively, there will be frequent visits from experts in design, other fields related to design, and public health to present their work and provide critique to students presentations.

Requirements: **Students outside of HSPH must request instructor permission to enroll in this course**

Design of Social Innovation (205505)

Patrick Whitney

Andre Nogueira

2020 Spring (5 Credits) **Schedule:** F 0100 PM - 0430 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The Design for Social Innovation (DSI) is a graduate-level course with a total of maximum 30 students with multidisciplinary background. The course is composed of 15 sessions extended during a total period of 16 weeks from January 31st to May 15th, 2020. By using the Whole View Model (WVM) as a critical approach towards dealing with complex ambiguous problems, such as designing Happy Cities, students will explore how might design methods be applied to overcome public health issues of such nature. The model is explained in the journal article mentioned below.

The course is structured around hands-on approaches to engage students in public health challenges in urban environments. Two main parallel projects will enable students to learn how to apply the frameworks and methods of the WVM: (1) a semester-long group project and (2) individual work. While in the semester-long group project students will engage with organizations and institutions suggested by the instructors, in the individual work they will be encouraged to propose an organization dealing with complex ambiguous problems based on their own interest. Problems should be both socially relevant and rich with business opportunities (e.g. new forms of mobility, urban sprawl, education and learning, local food systems, government decision-making, among others).

Class Notes: **This course will meet at the iLab.**

Requirements: **Students outside of HSPH must request instructor permission to enroll**

in this course

Design of Social Innovation (205505)

Patrick Whitney

2017 Fall (5 Credits) **Schedule:** F 1130 AM - 0300 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This class is an introduction to design methods and frameworks, a form of knowledge that is particularly useful for addressing large ambiguous problems. While this type of problem is the norm in public health, other fields and professions face them with increased frequency. Design knowledge supplements standard science-based approaches when data is incomplete and changes quickly. It allows the exploration of solutions that may not have precedents but are nevertheless worth considering. This class will use a hands-on project from public health as the core example to provide students with depth of experience. To give them breadth of experience, they will conduct sprints that apply the frameworks and methods to problems in other complex ambiguous challenges such as new forms of mobility, learning and schools, food, and government decision-making.

Students will learn a set of processes that can be faster and used earlier than science-based methods. These methods will help students when they are faced with making decisions based on incomplete and fast-changing information in public health and other challenging areas. In the class, students will address how to detect infectious diseases before they become pandemics. They will use design methods to discover patterns of behavior that could indicate illness as it emerges and to propose non-medical interventions. This work will be set in the context of redesigning aspects of the World Health Organization.

Registration Note: Instructor permission required. Students should submit a short statement to Dr. Whitney about their background, why they want to take the course, and what they think they would contribute, or submit a note from a faculty member who is familiar with the student's work addressing what the student will contribute to the course and how the class will benefit the studen. Dr. Whitney's email address is whitney@hsph.harvard.edu.

Course Note: This course meets at the Harvard iLab in Allston.

Requirements: **HSPH: HSPH Degr + PHD Stu**

Additional Course Attributes:

Design of Social Innovation (205505)

Patrick Whitney

2019 Spring (5 Credits) **Schedule:** F 0100 PM - 0430 PM

Instructor Permissions: None **Enrollment Cap:** 33

Student work will be set in the context of "Smart Cities". Within this broad theme, they will work on well recognized topics ranging from traffic safety in the developing world to food deserts in the USA, and emerging topics including the future of the job to information as a new form of pollution,

It is an elective for juniors, seniors and graduate students from across Harvard. Students will be involved in diverse activities including gathering and analyzing ethnographic data, identifying patterns in the daily life, reframing problems, using early stage prototypes, concept creation and design of flexible systems and other design practices.

There will be frequent visits from experts in design, other fields related to design, and public health. Students will participate in design critiques, discuss their insights with the expert and defend their concepts.

Learning Outcomes

1. **Upon successful completion of this course, students should be able to:**
2. **Compare and contrast methods in design and methods in other fields with which they are familiar.**
3. **Find patterns in qualitative data.**
4. **Make presentations and arguments based on abductive logic even when faced with ambiguous and incomplete information.**
5. **Reframe problems.**
6. **Use early-stage prototypes that are fast, cheap and discovery-focused.**
7. **Sketch changes in an organization's offerings, value webs, activity systems and user journeys.**

Course Note: This course meets at the Harvard iLab in Allston.

Class Notes: **This course will meet at the iLab.**

Research with Large Databases (190610)

Ellen McCarthy

2020 Summer (2.5 Credits) **Schedule:** MTWRF 0200 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 31

Research with Large Databases (HPM299) provides an overview of existing data resources available to address research questions regarding clinical risk factors, treatment, outcomes and health policy. The course will cover a range of administrative, clinical, and survey databases commonly used in large database research, including the strengths and limitations of the different types of data. Special attention will be devoted to federal survey databases that are publicly available and readily usable by new investigators. Students will gain hands-on experience using SAS statistical software to obtain, create, manipulate, and analyze databases. Key statistical issues, including risk-adjustment and sampling weights, will be emphasized in the course. Students will evaluate published studies based on large databases, develop a proposal for analyzing a specific research question, and analyze data. Prior experience with SAS is not assumed or required. This course is taught only in SAS.

Course Prerequisite(s): ID207 or [(BST201 or BST202&203 or BST206&207/8) and (EPI200 or EPI201 or EPI208 or EPI500 or EPI505)]. All prerequisites can be taken concurrently.

Preference is to give to PCE degree students and then PCE non-degree students. PCE students will automatically be enrolled and non-degree students have priority in petition approvals

Requirements: **ID207 or [(BST201 or BST202&203 or BST206&207/8) and (EPI200 or EPI201 or EPI208 or EPI500 or EPI505)]. All prerequisites can be taken concurrently.**
